無線網路多媒體系統
Wireless Multimedia System

中央大學 吳曉光博士
http://wmlab.csie.ncu.edu.tw/course/wms
2004 Fall

First Week Agenda

- Course Preview
- Wireless Multimedia/Mobile Computing / Pervasive Computing
- Wireless Mobile Communications
- System Review and Fundamental Problems
- Next Week

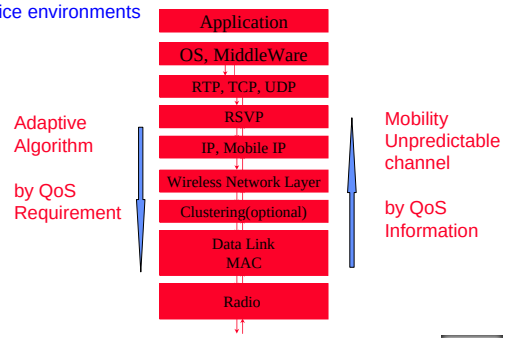
Course Preview

What is Going to Happen in the Course?

Course Contents

- Fundamental Wireless Technology
  - Propagation Model
  - Wireless Medium Access
  - Transport Solutions
  - Ad hoc Wireless System
  - Cellular System
  - Middleware Systems
  - Multimedia System
- Advanced Wireless Technology
  - Multicasting
  - Heterogeneous System
  - Routing Algorithms
  - QoS/ Reliable Transmissions

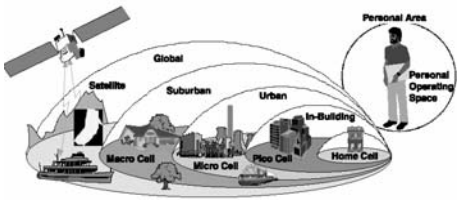
Roaming Across a variety of heterogeneous network and service environments



New Interests

- Provision of Sufficient Transmission Capacity for Broadband Mobile Multimedia: A Step Toward 4G
- Future Broadband Radio Access Systems for Integrated Services with Flexible Resource Management
- QoS Support for an All-IP system Beyond 3G
- Enhancing IP Service Provision over Heterogeneous Wireless Network
- Re-configurable Terminals: An Overview of Architectural Solutions

Ubiquitous Services



Adaptive Applications

Video Audio Graph Text

Varied type of service

Adaptive application coding

High ····· **Quality** ····· Low

Expectation of the Class

- Basic Understanding of PCS world
- Being able to do the wireless research
- Developing the capability to invent the key wireless applications

Aeronautical Communications

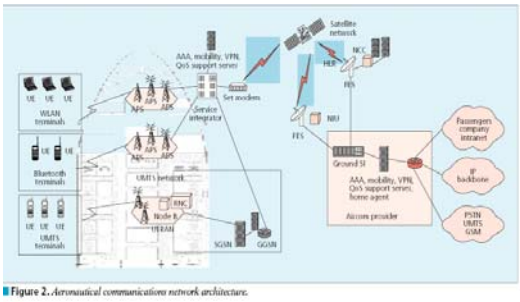


Figure 2. *Aeronautical communications network architecture.*

Situation-Aware Wireless Networks

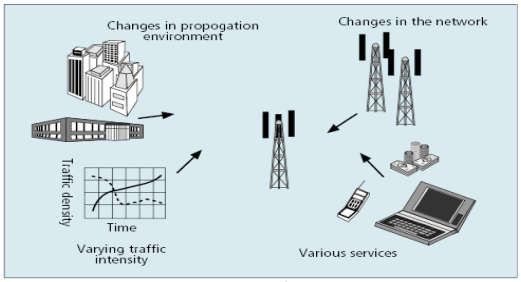

Figure 4. *Situation awareness functionality.*

Network Mobility Management

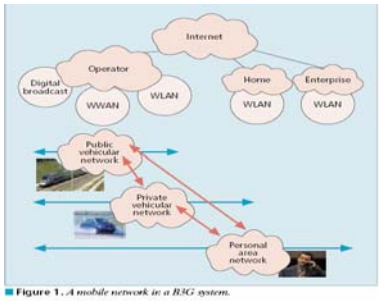

Figure 1. *A mobile network in a B3G system.*

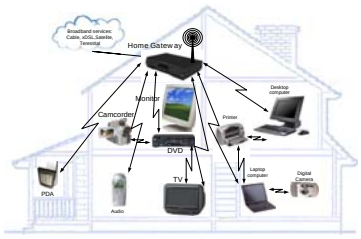
Ultra-Wideband Radio



Course Process

- Wireless Technology Introductions
  - Text Book
  - Wireless Communications and Network (William Stallings 2002)
- Paper reading and your presentations
- Wireless Multimedia Applications Exercises

Mobile Computing

Mobile phone today = multipurpose terminal for ...

Reading list for This Lecture

- Required Reading:
  - (Cfox95) D. Cox,"Wireless Personal Communications: What is it?,"IEEE Personal Communication Magazine, (April 1995) pp.20-35
  - (S.2001) M. Satyanaraynan, "Pervasive Computing: Vision and Challenges", IEEE Personal Communication Magazine, (August 2001), pp.10-17
  - (Bi2001) Qi Bi, George I. Zysman, and Hank Menkes, "Wireless Mobile Communications at the Start of the 21 Century", IEEE Communication Magazine (January 2001), pp. 110-116

Further Reading

- (Bolcskei2001) H. Bolcskei, A. J. Paulrai, K. V. S. Hari, and R. U. Nabar, "Fixed Broadband Wireless Access: State of the Art, Challegnes, and Future Directions", IEEE Communication Magazine

Mobile Computing

Applications	Verticals	Horizontals
Operating Systems	Mobile Operating Systems	
Devices	Notebooks / PDAs / Phones / PIM	
Wireless Networks	WANs	LANs

Mobile Computing

- information processing in general
  - not just communication or just computing, but both
- Any medium or combination of medium
  - process not just telephone voice or just data, but multimedia
- Mobility
  - components of the systems may be
    - moving, tether-less (wireless), portable
  - uses of the system may be moving

Why should we care ?

- Reason # 1 : $$$ & jobs
- Explosive growth of wireless voice, paging, and data services
  - 35-60 percent annual growth in the past decade
  - mobile phones in US will be 42 % of fixed -line phones by 2000
  - 700 million mobile users at the end of 2000
  - One billion expected by 2003
- Big demand for portable communicators and computers
  - 2 M portable computer in 1988 to 74.1 M units in 1998

Is there a more “academic” reason ?

- Reason # 2: a next step in the evolution of information system
- Evolution from personal computing to networked computing to mobile computing
- Evolution from wired telephony to cordless telephony to mobile cellular telephony
- At the same time, unification of computing and communication

Mobile Multimedia Systems

- Ubiquitous information access (everybody else)
  - e.g. wireless computing, mobile computing, nomadic computing
  - information distributed everywhere by “the net”
  - users carry (wireless) terminals to access the information services
  - terminal is the universal service access device
  - terminals adapt to location and services
  - Knowledge-based society
- Flexible Users Choices
  - In terms of access, service, content
  - Any where, anytime, any terminal equipments
- Wearable Computing terminal / Mobile Broadband services (MBS)

Pervasive Computing

- Technology that disappears
  - The most profound technologies are those that disappear. They weave themselves into the fabric of everyday life until they are indistinguishable from it”.
- Ubiquitous (Invisible) Computing (Xerox PARC)
  - Cheap computers of different scale and types embedded everywhere
  - Potentially 100s of computers per room that disappear into background (e.g. active badge, tabs, pads, live boards..)
  - User centric, not terminal centric
  - Computers swapped and shared among users
- Effective Use of Smart Spaces
- Invisibility
- Localized Scalability
- Masking Uneven Conditioning

Support for Pervasive Computing

- User Intent
- Cyber Foraging
- Adaptation Strategy
- High-Level Energy Management
- Balancing Pro-activity and Transparency
- Privacy and Trust
- Impact on Layering

Pervasive Computing

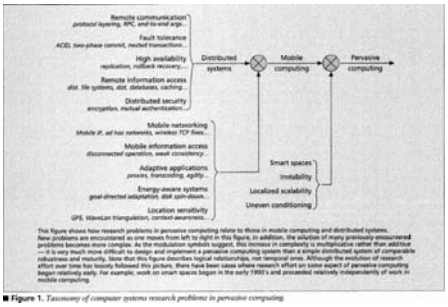


Figure 1. *Taxonomy of computer systems research problems in pervasive computing.*

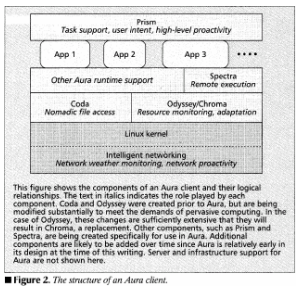
Aura Client



This figure shows the components of an Aura client and their logical relationships. The text in italics indicates the role played by each component. Coda and Odyssey were created prior to Aura, but are being modified substantially to meet the demands of pervasive computing. In the case of Odyssey, these changes are sufficiently extensive that they will result in Chroma, a replacement. Other components, such as Prism and Spectra, are being created specifically for use in Aura. Additional components are likely to be added over time since Aura is relatively early in its design at the time of this writing. Server and infrastructure support for Aura are not shown here.

Figure 2. *The structure of an Aura client.*

Wireless Communications

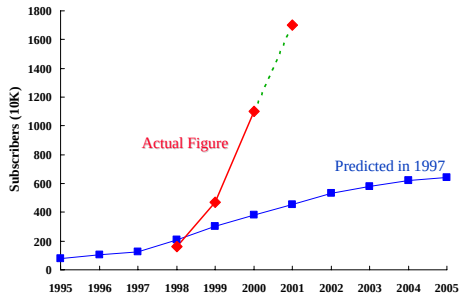
Mobile Communications

Fixed Broadband Wireless Communications

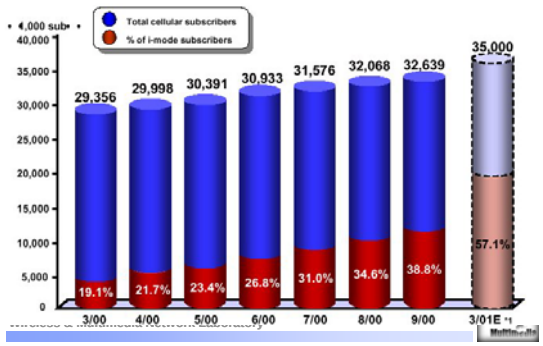
Evolution of Mobile Wireless Systems

- First Generation : Analog – Voice
  - Analog modulation
  - Cellular phone (AMPS) with manual roaming
  - Cordless phones
  - Packet radio networks
- Second Generation : Digital - Voice & Data
  - WAP (wireless application protocol)
  - 2.5 G GPRS
  - Wireless data LANs (802.11), MANs (Metricom), WANs (CDPD, ARDIS, RAM)
- Third Generation: Digital – Multimedia
  - Unified digital wireless access anytime, anywhere
  - Voice, data, images, video, music, sensor etc.
- 4G~ Life after Third-Generation Mobile Communications

台灣行動電話發展趨勢圖



Cellular Service Subscription



Wireless Personal Communications

- What is it?
  - Cellular telephone
  - Cordless telephone
  - Paging systems
  - Wide area data networks
  - Local area data networks
- Many ways to segment PCS
  - Applications
  - Extent of coverage
  - Degree of mobility (speed, area)
  - Circuit switched voice vs. packet-switched data
  - Mode of communication (messaging, two-way real time, paging, agents)
  - User location (indoor vs. outdoor, train, airplane)
- **Common ingredients in all PCS activity**
  - Desire for mobility in communications
  - Desire to be free from tethers

2000 Market Share

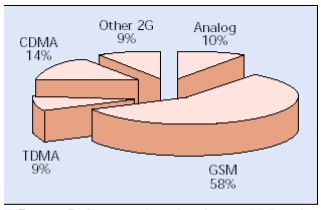


Figure 5. *Estimated market shares of 1G and 2G wireless mobile systems in 2000.*

Mobile Terminal Growth

Fundamental Issues

Three System Components

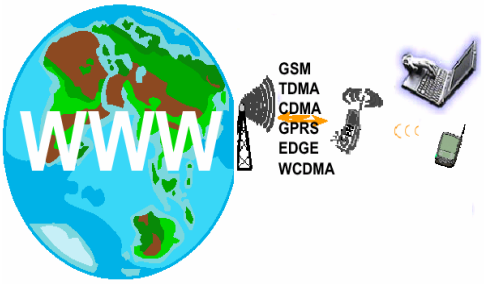
End-Point
Terminal Architecture

Infrastructure
Network architecture

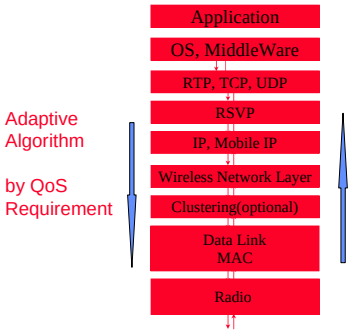
Services
OS & Middleware

Personal area network

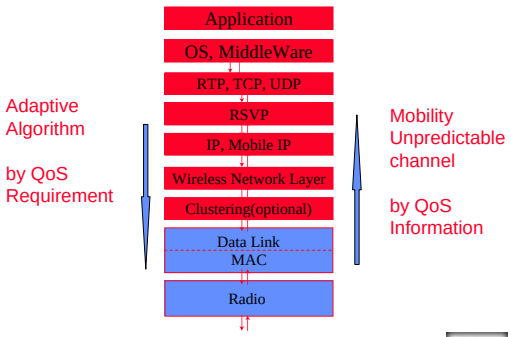
Connect devices to internet on the mobile infrastructure world wide



QoS and Multimedia Traffic Support



QoS and Multimedia Traffic Support



Channel Propagation and Fading

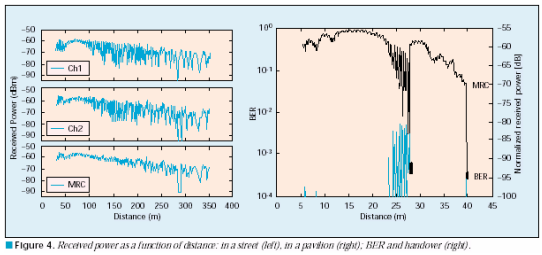


Figure 4. *Received power as a function of distance: in a street (left), in a pavilion (right); BER and handover (right).*

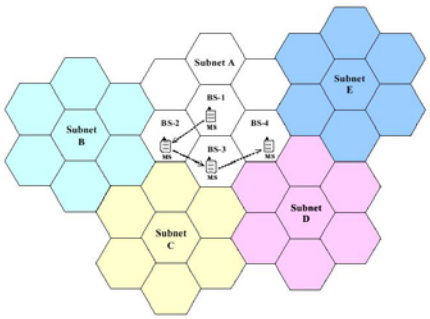
Intra-Domain Handoff

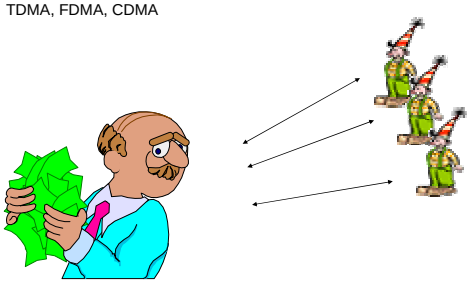


Resource Sharing

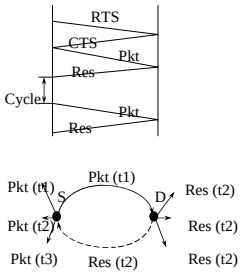
- Reservation Approaches
  - Centralized Control
  - token (round robin)
- Collision Approaches
  - fight for resource
  - distributed control

Through A Centralized Control

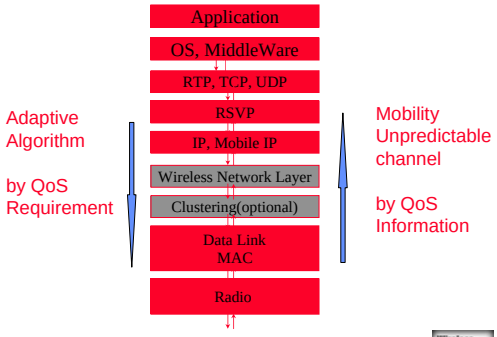
- TDMA, FDMA, CDMA



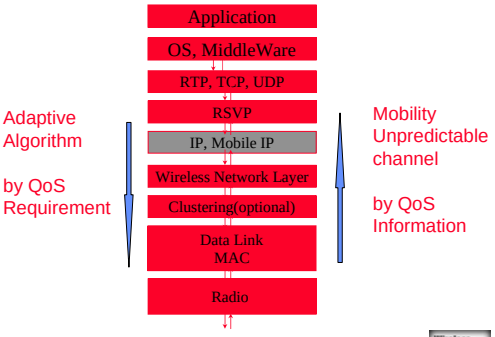
MACA/PR



QoS and Multimedia Traffic Support



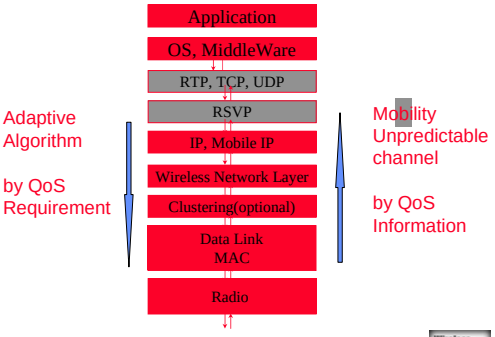
QoS and Multimedia Traffic Support



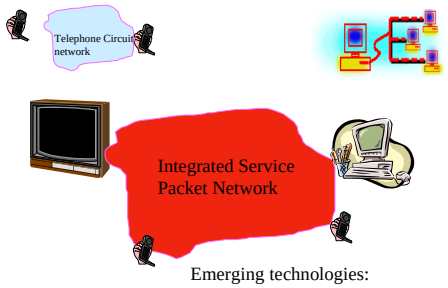
Internetworking, IP, Mobile

- Internetworking
  - roaming through different networks
  - supporting IP format
  - supporting IP portability

QoS and Multimedia Traffic Support



What problem does Multimedia Bring?



Emerging technologies:

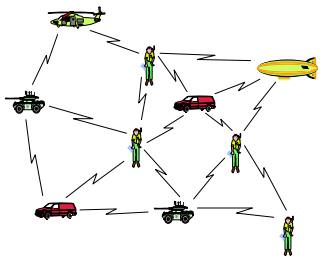
1. "Datagrams" + "Flows" IPv6
2. "Virtual Circuits" (ATM)

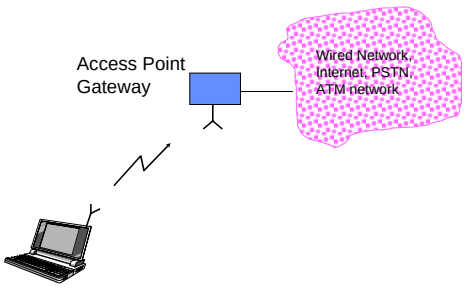
5

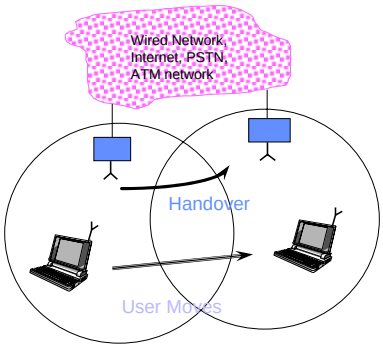
System Configurations

- Ad hoc ~ Multi-hop
  - Wireless LAN
  - Blue-tooth
  - Packet Radio
  - WAMIS
- Cellular ~ GSM, WAP, GPRS, 3G
- Satellite ~ LEO, GEO

Ad Hoc Wireless Network





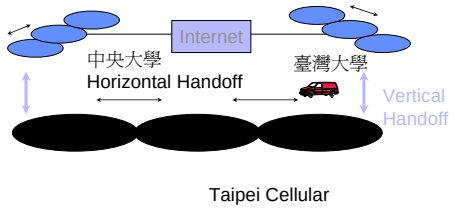


Typical Cellular Call

- Initialization (find your base-station)
- Service Request
  - Location Level : Paging
  - Channel Assignments
- Handoff

Wireless Comm: Heterogeneity & Security

- Heterogeneous networks



Taipei Cellular

Limited & Variable Bandwidth

- Low bandwidth compared to wired
- Highly variable bandwidth
- High latency

Wireless Communication

- More difficult than wired communication
- Dis-connections

Mobility

- Address migration
- Location-dependent information
- Migration locality

Portability

- Light weight power
- Risks to data
- Small user interface
- Small storage capacity

Challenges in Mobile Multimedia Infor-System

- Portable end-points
- End-to-end Quality of Services
- Seamless operation under context (location) changes
- Context-aware operation
- Secure operation

Channel Propagation and Fading

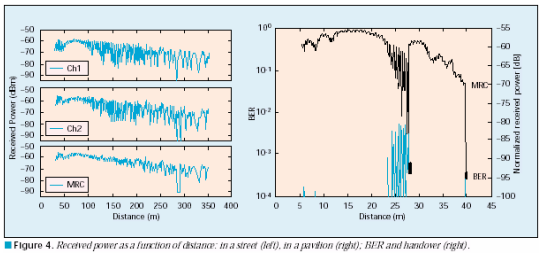


Figure 4. *Received power as a function of distance: in a street (left), in a pavilion (right); BER and handover (right).*
