2009 Fall

Wireless & Multimedia Network Laboratory™

CS'E

First Week Agenda

- ◆ Course Preview
- ◆ Wireless Multimedia/Mobile Computing / Pervasive Computing
- ◆ Wireless Mobile Communications
- ◆ System Review and Fundamental Problems
- ◆ Next Week

Wireless & Multimedia Network Laboratory™

CS'E

Course Contents

- ◆ Fundamental Wireless Technology
 - Propagation Model
 - Wireless Medium Access
 - Transport Solutions
 - Ad hoc/Mesh Wireless System
 - Cellular System
 - Middleware Systems
 - Multimedia System
- ◆ Advanced Wireless Technology
 - Multicasting
 - Beyond 3G
 - Routing Algorithms/Mesh Network/VANET
 - QoS/ Reliable Multimedia Transmissions

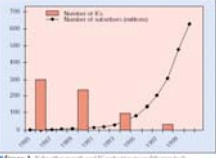

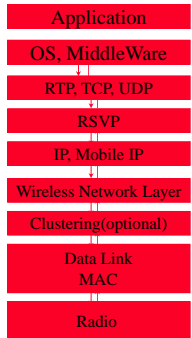

Wireless & Multimedia Network Laboratory™

CS'E

Roaming Across a variety of heterogeneous network and service environments

Wireless & Multimedia Network Laboratory™

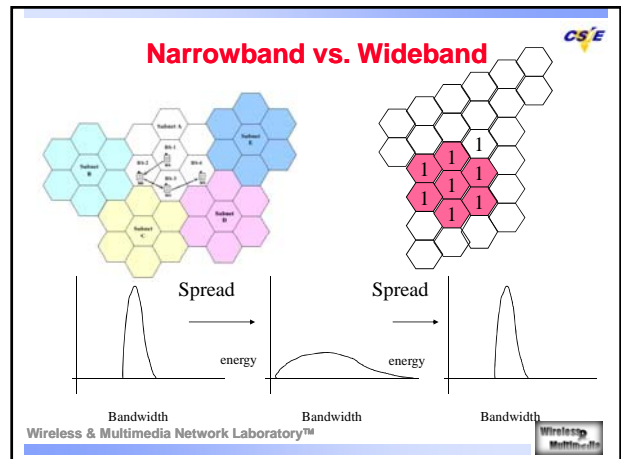

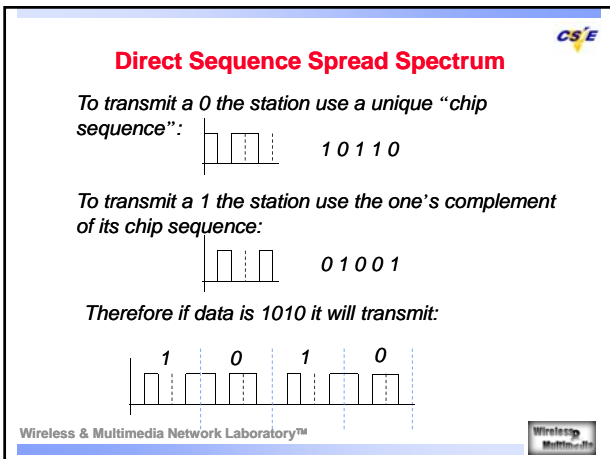

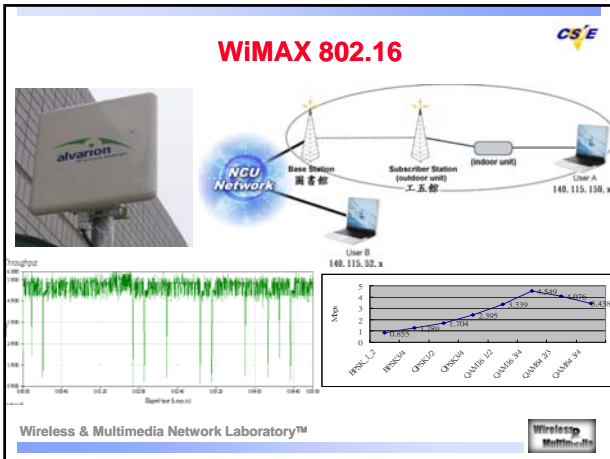

CS'E

WiMAX Nomadic and Portable

Ref: Margaret LaBrecque, "Enabling Deployments through Standards and Certification," WiMax, 2003

Wireless & Multimedia Network Laboratory™

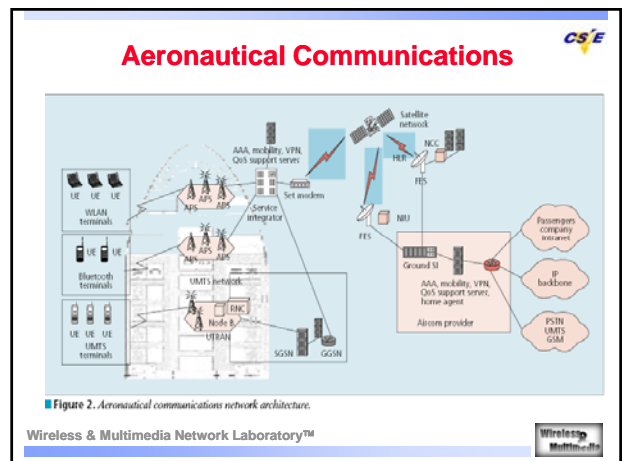

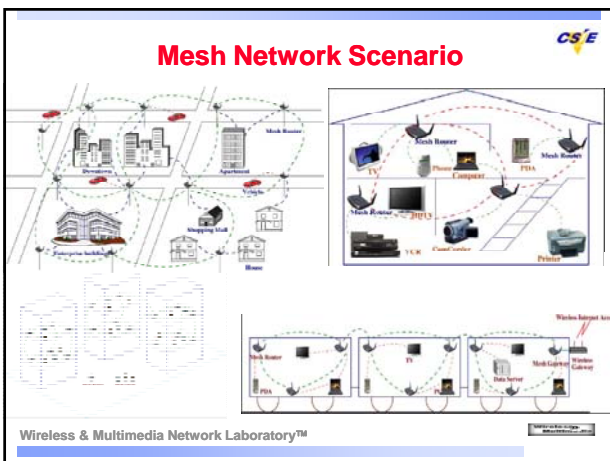

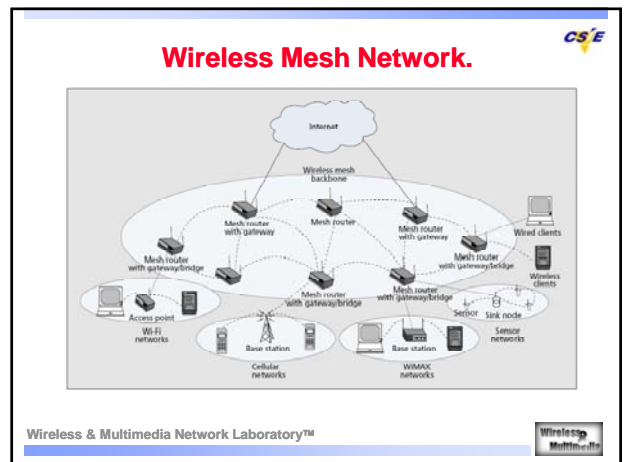

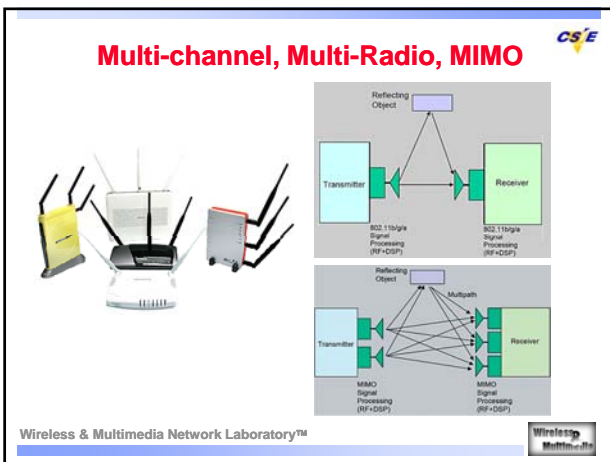

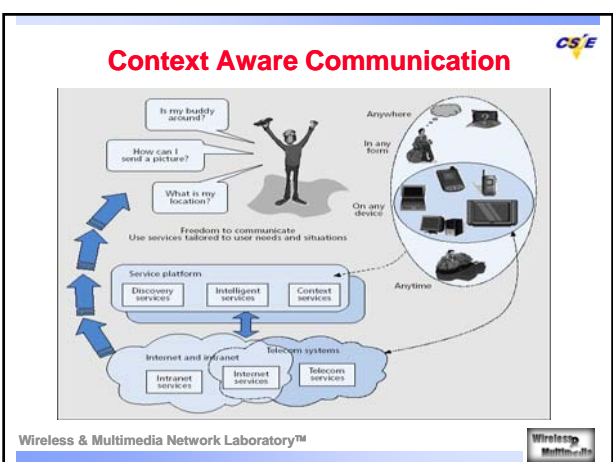

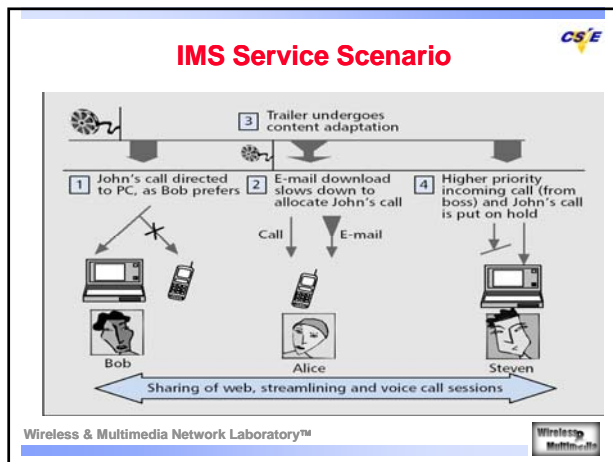

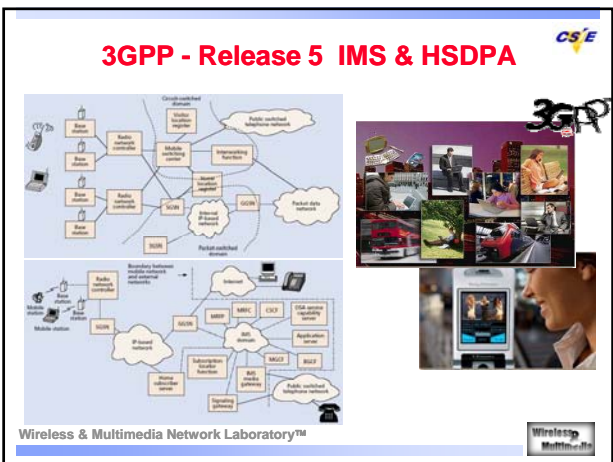

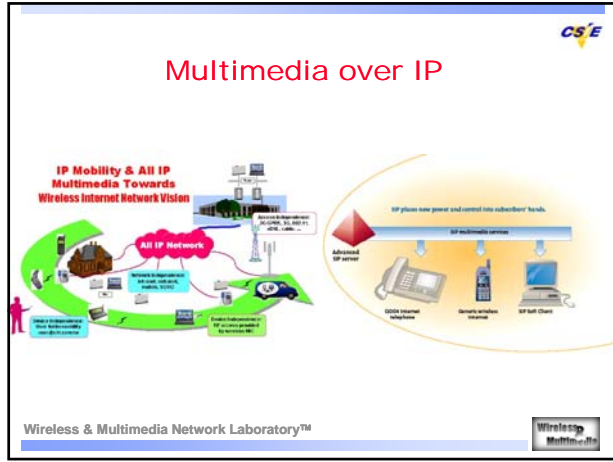

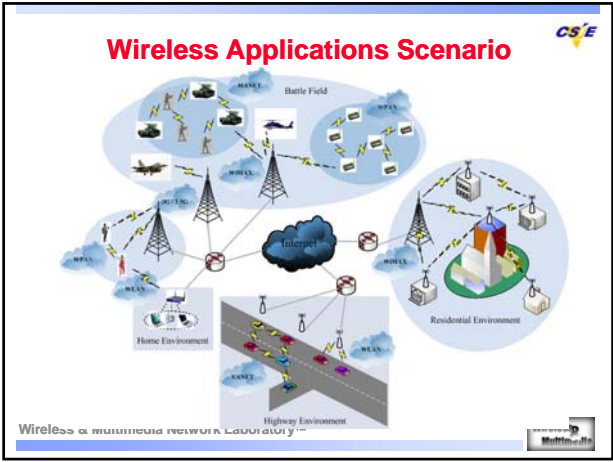

CR (Cognitive Radio)

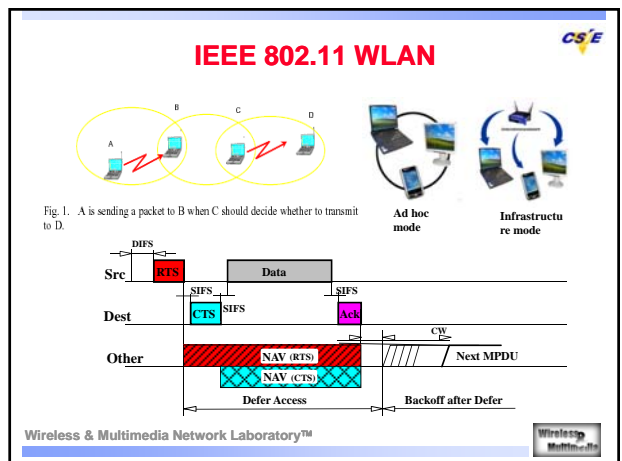

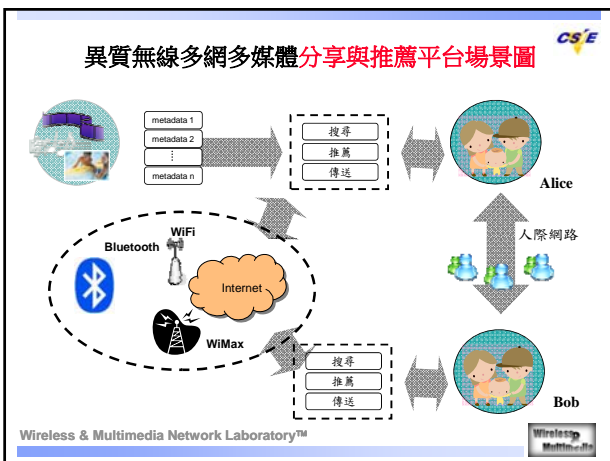

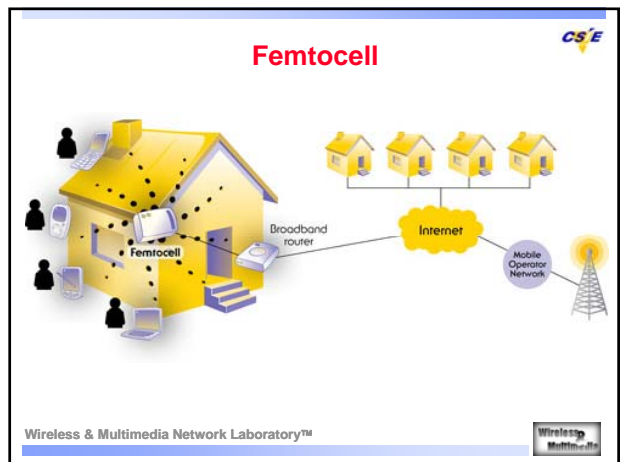

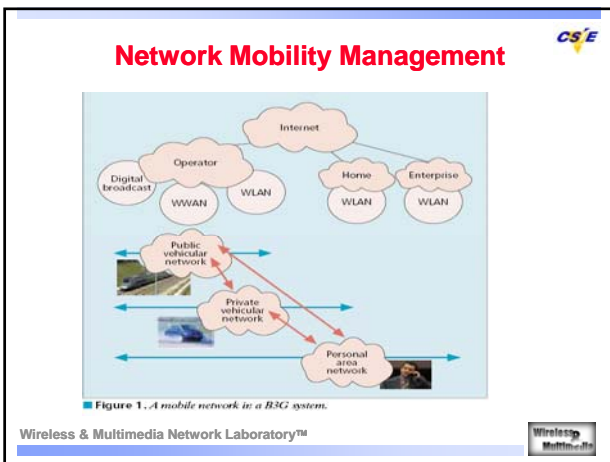

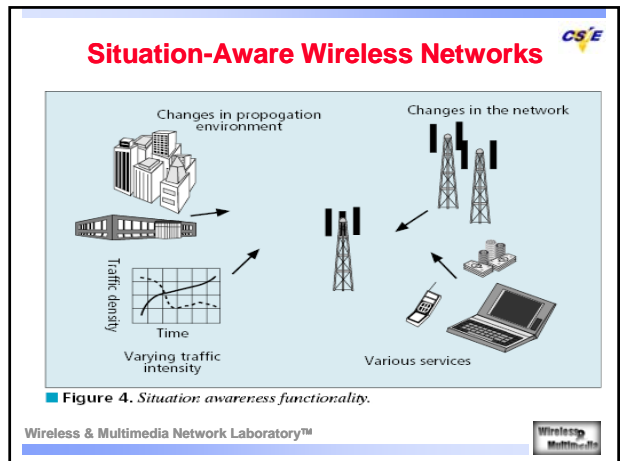

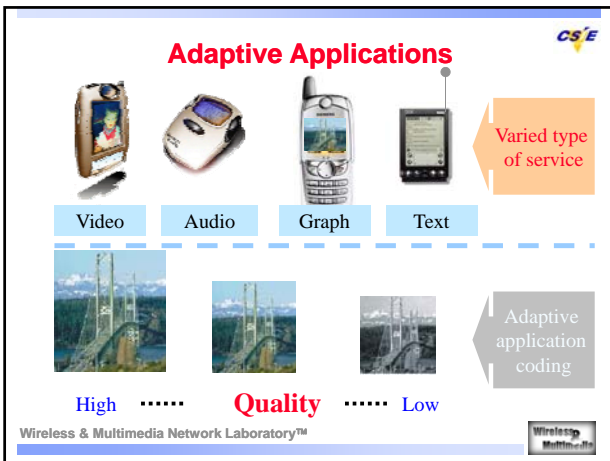

- The CR idea was initially introduced by Joseph Mitola. On average, only 2% of allocated spectrum in the U.S. is actually in use

Amplitude, Time, Frequency

Wireless & Multimedia Network Laboratory™

Quiz 0: WLAN Performance Anomaly Problem

nominal rate (Mbps)		throughput (Mbps)	
A	B	A	B
1	11	0.73	0.76

Wireless & Multimedia Network Laboratory™

Fairness for upstream and downstream

Wireless & Multimedia Network Laboratory™

Expectation of the Class

- ◆ Basic Understanding of PCS world
- ◆ Being able to do the wireless research
- ◆ Developing the capability to invent the key wireless applications

Wireless & Multimedia Network Laboratory™

Course Process

- ◆ Paper reading and your presentations
- ◆ Wireless Multimedia Applications Exercises

Wireless & Multimedia Network Laboratory™

Mobile Computing

Wireless & Multimedia Network Laboratory™

Mobile phone today = multipurpose terminal for ...

Wireless & Multimedia Network Laboratory™

Reading list for This Lecture CS E

- ◆ Required Reading:
 - (S.2001) M. Satyanarayanan, "Pervasive Computing: Vision and Challenges", IEEE Personal Communication Magazine, (August 2001), pp.10-17
 - (Bi2001) Qi Bi, George I. Zysman, and Hank Menkes, "Wireless Mobile Communications at the Start of the 21 Century", IEEE Communication Magazine (January 2001), pp. 110-116
- ◆ Further Reading
 - (Bolcskei2001) H. Bolcskei, A. J. Paulraj, K. V. S. Hari, and R. U. Nabar, "Fixed Broadband Wireless Access: State of the Art, Challenges, and Future Directions", IEEE Communication Magazine

Wireless & Multimedia Network Laboratory™

Mobile Computing CS E

Applications	Verticals	Horizontals		
Operating Systems	Mobile Operating Systems			
Devices	Notebooks	PDAs	Phones	PIM
Wireless Networks	WANs	LANs		

Wireless & Multimedia Network Laboratory™

Mobile Computing CS E

- ◆ information processing in general
 - not just communication or just computing, but both
- ◆ Any medium or combination of medium
 - process not just telephone voice or just data, but multimedia
- ◆ Mobility
 - components of the systems may be
 - moving, tether-less (wireless), portable
 - uses of the system may be moving

Wireless & Multimedia Network Laboratory™

Why should we care ? CS E

- ◆ Reason # 1 : \$\$\$ & jobs
- ◆ Explosive growth of wireless voice, paging, and data services
 - 35-60 percent annual growth in the past decade
 - mobile phones in US will be 42 % of fixed -line phones by 2000
 - 700 million mobile users at the end of 2000
 - One billion expected by 2003
- ◆ Big demand for portable communicators and computers
 - 2 M portable computer in 1988 to 74.1 M units in 1998

Wireless & Multimedia Network Laboratory™

Is there a more "academic" reason ? CS E

- ◆ Reason # 2: a next step in the evolution of information system
- ◆ Evolution from personal computing to networked computing to mobile computing
- ◆ Evolution from wired telephony to cordless telephony to mobile cellular telephony
- ◆ At the same time, unification of computing and communication

Wireless & Multimedia Network Laboratory™

Mobile Multimedia Systems CS E

- ◆ Ubiquitous information access (everybody else)
 - e.g. wireless computing, mobile computing, nomadic computing
 - information distributed everywhere by "the net"
 - users carry (wireless) terminals to access the information services
 - terminal is the universal service access device
 - terminals adapt to location and services
 - Knowledge-based society
- ◆ Flexible Users Choices
 - In terms of access, service, content
 - Any where, anytime, any terminal equipments
- ◆ Wearable Computing terminal / Mobile Broadband services (MBS)

Wireless & Multimedia Network Laboratory™

Pervasive Computing CS E

- ◆ Technology that disappears
 - The most profound technologies are those that disappear. They weave themselves into the fabric of everyday life until they are indistinguishable from it.
- ◆ Ubiquitous (Invisible) Computing (Xerox PARC)
 - Cheap computers of different scale and types embedded everywhere
 - Potentially 100s of computers per room that disappear into background (e.g. active badge, tabs, pads, live boards..)
 - User centric, not terminal centric
 - Computers swapped and shared among users
- ◆ Effective Use of Smart Spaces
- ◆ Invisibility
- ◆ Localized Scalability
- ◆ Masking Uneven Conditioning

Wireless & Multimedia Network Laboratory™ Wireless Multimedia

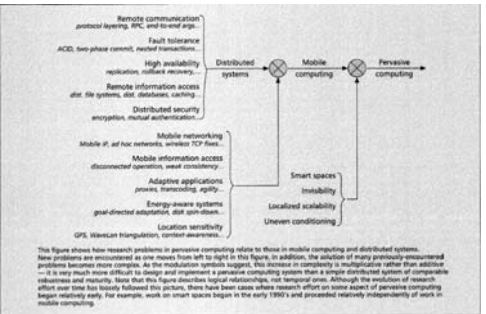

Support for Pervasive Computing CS E

- ◆ User Intent
- ◆ Cyber Foraging
- ◆ Adaptation Strategy
- ◆ High-Level Energy Management
- ◆ Balancing Pro-activity and Transparency
- ◆ Privacy and Trust
- ◆ Impact on Layering

Wireless & Multimedia Network Laboratory™ Wireless Multimedia

Pervasive Computing CS E

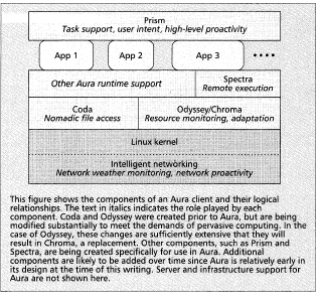

Remote communication: protocol layering, MAC, end-to-end app., Fault tolerance, AOD, two-phase commit, nested transactions.
 High availability: replication, outlier recovery.
 Remote information access: file systems, dist. databases, caching.
 Distributed security: encryption, mutual authentication.
 Mobile networking: Mobile IP, ad hoc networks, wireless TCP flow.
 Mobile information access: disconnected operation, weak consistency.
 Adaptive applications: proactive, forecasting, reply.
 Energy-aware systems: goal-directed adaptation, dist. task sched.
 Location sensitivity: GPS, Wireless triangulation, context awareness...
 Distributed systems: Mobile computing: Pervasive computing: Smart spaces: Invisibility: Localized scalability: Uneven conditioning.

This figure shows how research problems in pervasive computing relate to those in mobile computing and distributed systems. New problems are encountered as one moves from left to right in this figure. In addition, the solution of many previously-encountered problems becomes more complex. As the modulation symbols suggest, this increase in complexity is multiplicative rather than additive — it is very much more difficult to design and implement a pervasive computing system than a simple distributed system of comparable robustness and reliability. Note that this figure describes logical relationships, not temporal time. Although the evolution of research effort over time has loosely followed this picture, there have been cases where research effort on some aspect of pervasive computing began relatively early. For example, work on smart spaces began in the early 1990's and proceeded relatively independently of work in mobile computing.

■ Figure 1. Taxonomy of computer systems research problems in pervasive computing.

Wireless & Multimedia Network Laboratory™ Wireless Multimedia

Aura Client CS E

Prism: Task support, user intent, high-level proactivity
 App 1, App 2, App 3, ...
 Other Aura runtime support: Coda (Nomadic file access), Odyssey/Chroma (Resource monitoring, adaptation), Spectra (Remote execution)
 Linux kernel
 Intelligent networking: Network-weather monitoring, network proactivity.

This figure shows the components of an Aura client and their logical relationships. The text in italics indicates the role played by each component. Coda and Odyssey were created prior to Aura, but are being modified substantially to meet the demands of pervasive computing. In the case of Odyssey, these changes are sufficiently extensive that they will result in Chroma, a replacement. Other components, such as Prism and Spectra, are being created specifically for use in Aura. Additional components are likely to be added over time since Aura is relatively early in its design at the time of this writing. Server and infrastructure support for Aura are not shown here.

■ Figure 2. The structure of an Aura client.

Wireless Communications CS E

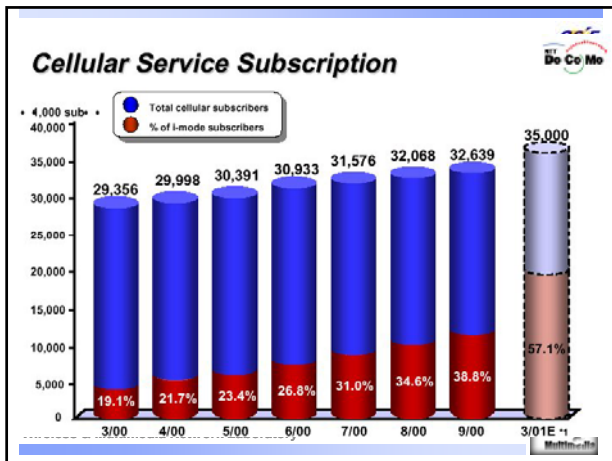

Mobile Communications
Fixed Broadband Wireless Communications

Wireless & Multimedia Network Laboratory™ Wireless Multimedia

Evolution of Mobile Wireless Systems CS E

- ◆ First Generation : Analog – Voice
 - Analog modulation
 - Cellular phone (AMPS) with manual roaming
 - Cordless phones
 - Packet radio networks
- ◆ Second Generation : Digital - Voice & Data
 - WAP (wireless application protocol)
 - 2.5 G GPRS
 - Wireless data LANs (802.11), MANs (Metricom), WANs (CDPD, ARDIS, RAM)
- ◆ Third Generation: Digital – Multimedia
 - Unified digital wireless access anytime, anywhere
 - Voice, data, images, video, music, sensor etc.
- ◆ 4G~ Life after Third-Generation Mobile Communications

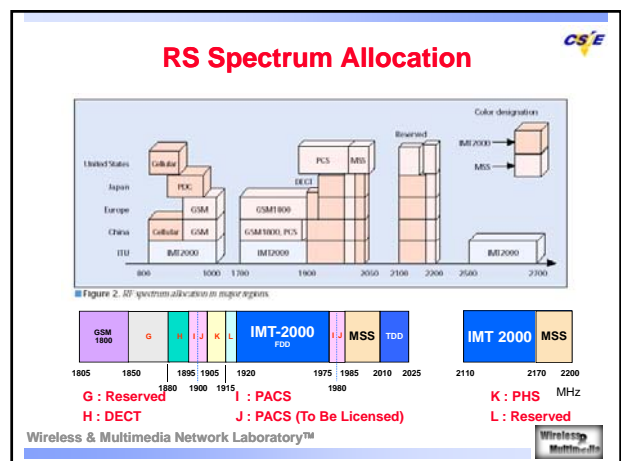

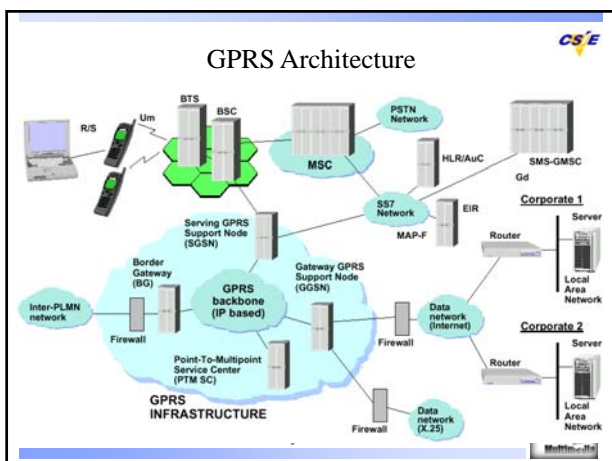

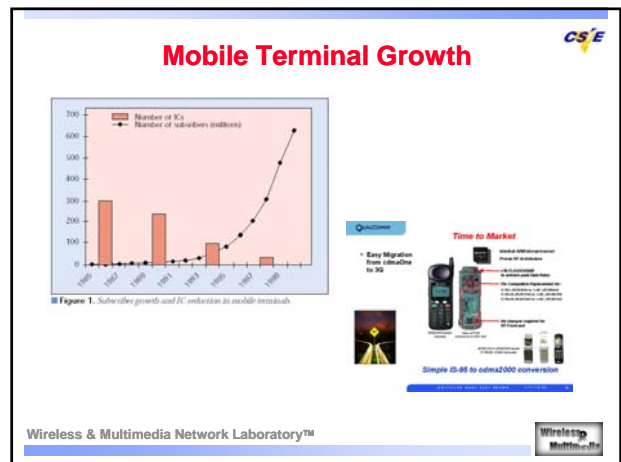

Wireless & Multimedia Network Laboratory™ Wireless Multimedia

Wireless Personal Communications

- What is it?
 - Cellular telephone
 - Cordless telephone
 - Paging systems
 - Wide area data networks
 - Local area data networks
- Many ways to segment PCS
 - Applications
 - Extent of coverage
 - Degree of mobility (speed, area)
 - Circuit switched voice vs. packet-switched data
 - Mode of communication (messaging, two-way real time, paging, agents)
 - User location (indoor vs. outdoor, train, airplane)
- Common ingredients in all PCS activity
 - Desire for mobility in communications
 - Desire to be free from tethers

Topology of a Wireless LAN

CS'E

- 連接(Access)應用: 使用者與網路的連接
- 中繼(Trunk)或骨幹(Backbone)應用: 網路與網路之間的連接. 例如,大樓與大樓之間的通訊, 或是遠方網路的連接.

1-10公里

Wireless & Multimedia Network Laboratory™

Medium Reservation

CS'E

- Duration field in RTS and CTS frames distribute **Medium Reservation** information which is stored in a **Network Allocation Vector (NAV)**.
- Defer on either NAV or "CCA" indicating **Medium Busy**.
- Use of RTS / CTS is optional but **must** be implemented.

QoS and Multimedia Traffic Support

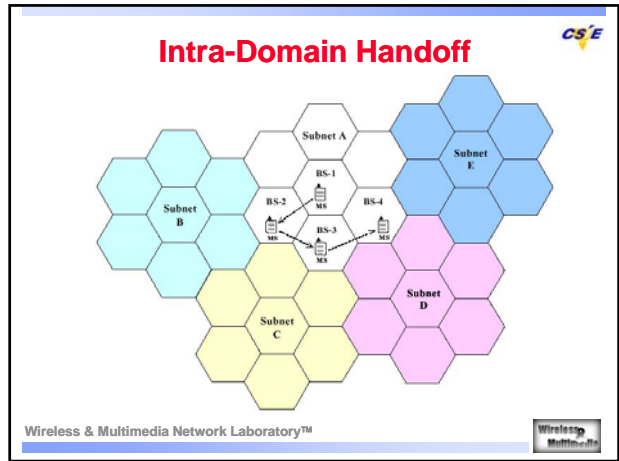

Wireless & Multimedia Network Laboratory™

- ### Resource Sharing
- ◆ Reservation Approaches
 - Centralized Control
 - token (round robin)
 - ◆ Collision Approaches
 - fight for resource
 - distributed control
- Wireless & Multimedia Network Laboratory™

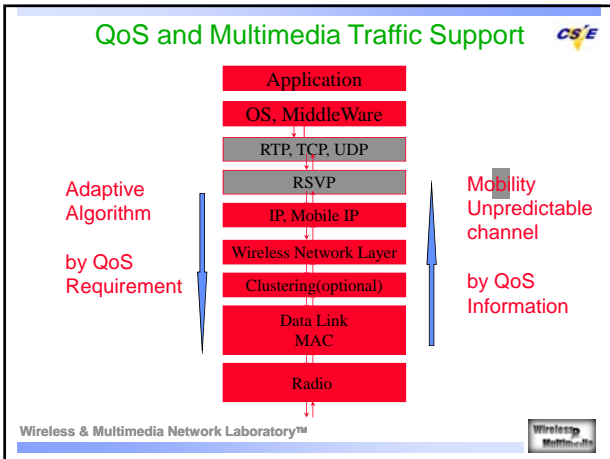

Internetworking, IP, Mobile CS'E

- ◆ Internetworking
 - roaming through different networks
 - supporting IP format
 - supporting IP portability

Wireless & Multimedia Network Laboratory™

What problem does Multimedia Bring? CS'E

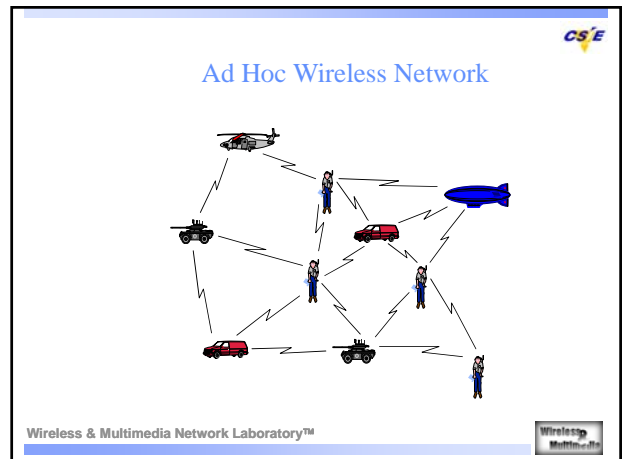

Emerging technologies:

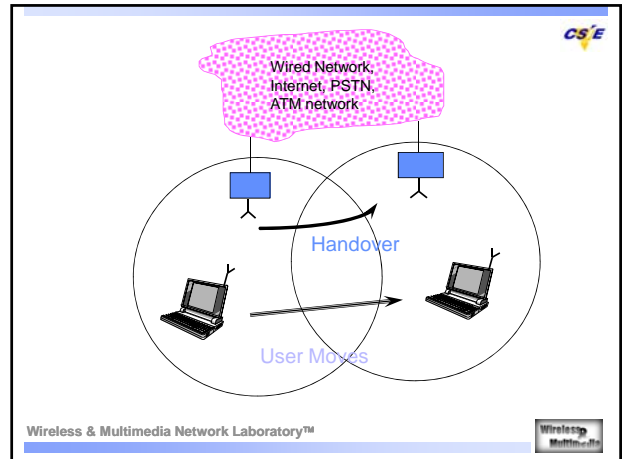

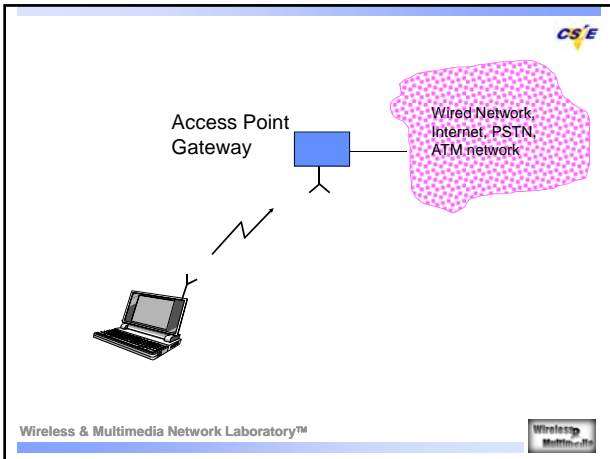

1. "Datagrams" + "Flows" IPv6
2. "Virtual Circuits" (ATM)

5

Wireless & Multimedia Network Laboratory™

- ### System Configurations CS'E
- ◆ Ad hoc ~ Multi-hop
 - Wireless LAN
 - Blue-tooth
 - Packet Radio
 - WAMIS
 - ◆ Cellular ~ GSM, WAP, GPRS, 3G
 - ◆ Satellite ~ LEO, GEO
- Wireless & Multimedia Network Laboratory™

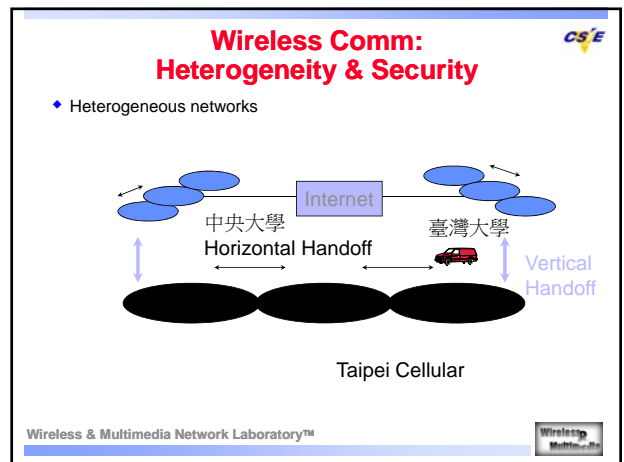

Typical Cellular Call

CS'E

- ◆ Initialization (find your base-station)
- ◆ Service Request
 - Location Level : Paging
 - Channel Assignments
- ◆ Handoff

Wireless & Multimedia Network Laboratory™

Limited & Variable Bandwidth

CS'E

- ◆ Low bandwidth compared to wired
- ◆ Highly variable bandwidth
- ◆ High latency

Wireless & Multimedia Network Laboratory™

Wireless Communication

CS'E

- ◆ More difficult than wired communication
- ◆ Dis-connections

Wireless & Multimedia Network Laboratory™

Mobility

CS E

- ◆ Address migration
- ◆ Location-dependent information
- ◆ Migration locality

Wireless & Multimedia Network Laboratory™

Portability

CS E

- ◆ Light weight power
- ◆ Risks to data
- ◆ Small user interface
- ◆ Small storage capacity

Wireless & Multimedia Network Laboratory™

Challenges in Mobile Multimedia Infor-System

CS E

- ◆ Portable end-points
- ◆ End-to-end Quality of Services
- ◆ Seamless operation under context (location) changes
- ◆ Context-aware operation
- ◆ Secure operation

Wireless & Multimedia Network Laboratory™

Channel Propagation and Fading
