2010 Fall

Wireless & Multimedia Network Laboratory™

CS/E

First Week Agenda

- ◆ Course Preview
- ◆ Wireless Multimedia/Mobile Computing / Pervasive Computing
- ◆ Wireless Mobile Communications
- ◆ System Review and Fundamental Problems
- ◆ Next Week

Wireless & Multimedia Network Laboratory™

CS/E

Course Contents

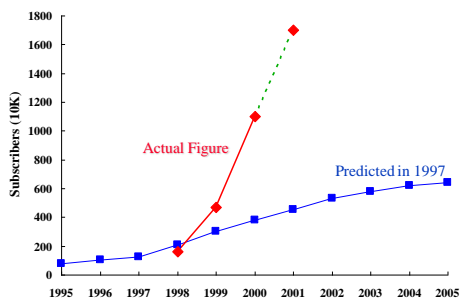

- ◆ Fundamental Wireless Technology
 - Propagation Model
 - Wireless Medium Access
 - Transport Solutions
 - Ad hoc/Mesh Wireless System
 - Cellular System
 - Middleware Systems
 - Multimedia System
- ◆ Advanced Wireless Technology
 - Multicasting
 - Beyond 3G
 - Routing Algorithms/Mesh Network/VANET
 - QoS/ Reliable Multimedia Transmissions

Wireless & Multimedia Network Laboratory™

WiMAX Nomadic and Portable

SEEKS BEST CONNECTION
2 to 3 Kilometers Away

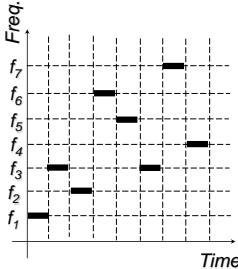

Ref: Margaret LaBrecque, "Enabling Deployments through Standards and Certification," WiMax, 2003

Wireless & Multimedia Network Laboratory™

Frequency Hopping Spread Spectrum

- Transmitted signal is spread over a wide range of frequencies. (i.e. 2.400-2.485 GHz)
- Transmission usually hop 35 times per second.

Wireless & Multimedia Network Laboratory™

Direct Sequence Spread Spectrum

To transmit a 0 the station use a unique "chip sequence":

To transmit a 1 the station use the one's complement of its chip sequence:

Therefore if data is 1010 it will transmit:

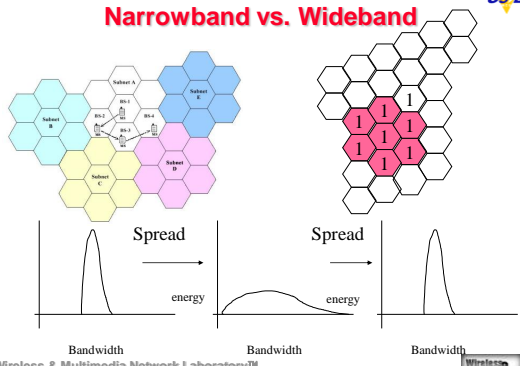

Wireless & Multimedia Network Laboratory™

DS-SS

- Processing Gain:
- SF=2 cases:
 - $(1, 1) \otimes (1, 1) = 1+1=2$ (Processing Gain)
 - $(1, 1) \otimes (1, -1) = 1-1=0$ (orthogonal)
- SF=4 cases:
 - $(1, 1, 1, 1) \otimes (1, 1, 1, 1) = 1 + 1 + 1 + 1 = 4$ (Processing Gain)
 - $(1, 1, 1, 1) \otimes (1, 1, -1, -1) = 1 + 1 - 1 - 1 = 0$ (Orthogonal)
- $SIR = Pr * \text{Processing Gain} / \text{Interference}$
- $= Pr * (\text{Total_Radio_Frequencyband} / \text{Bitrate}) / \text{Interference}$

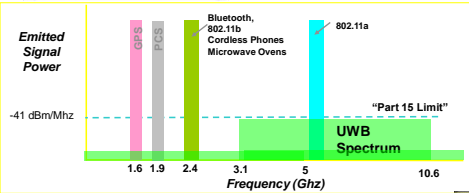

Wireless & Multimedia Network Laboratory™

Narrowband vs. Wideband

Wireless & Multimedia Network Laboratory™

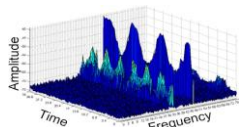

Ultra-Wideband Radio

Wireless & Multimedia Network Laboratory™

CR (Cognitive Radio)

- The CR idea was initially introduced by Joseph Mitola. On average, only 2% of allocated spectrum in the U.S. is actually in use

Wireless & Multimedia Network Laboratory™

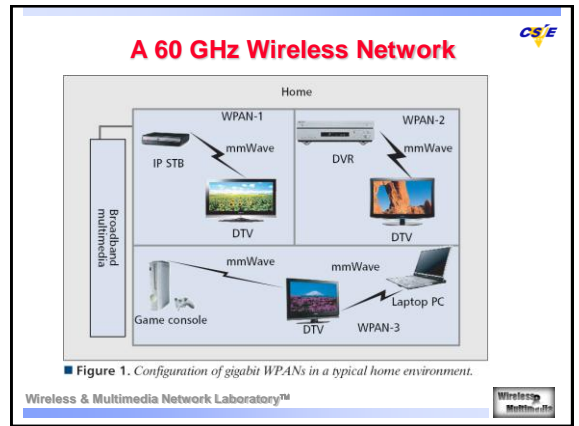

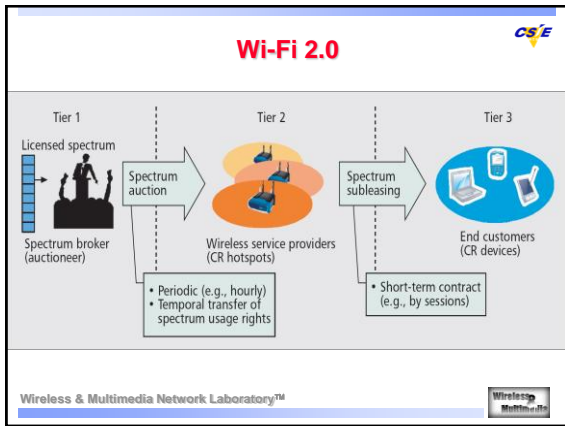

Figure 1. Configuration of gigabit WPANs in a typical home environment.

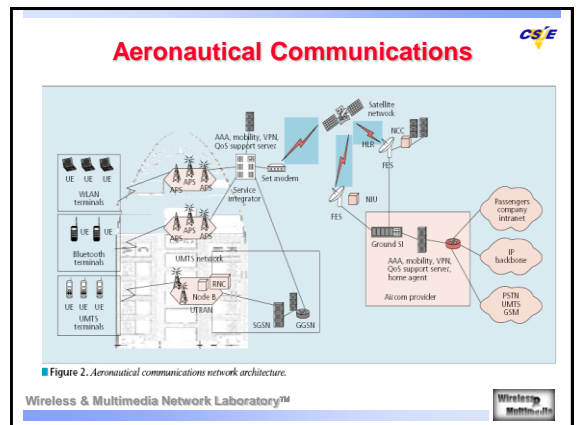

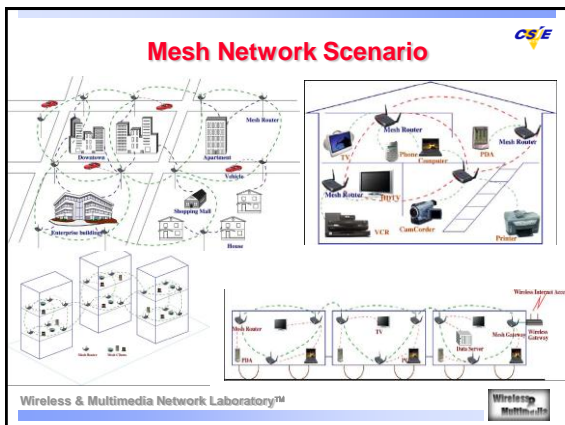

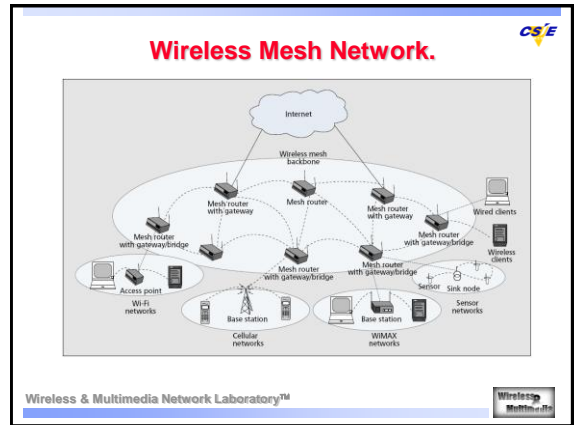

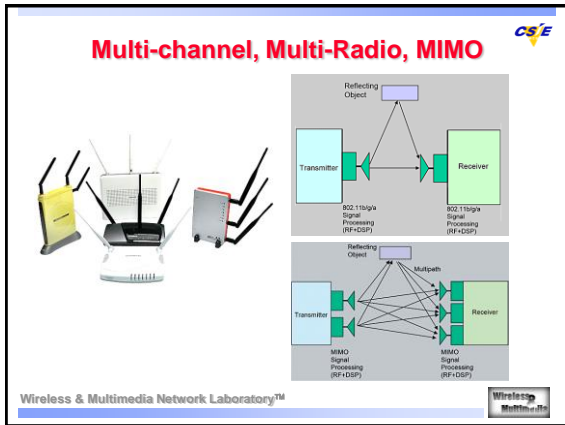

Figure 2. Aeronautical communications network architecture.

Wireless Applications Scenario

Battle Field Home Environment Residential Environment

Highway Environment

Wireless & Multimedia Network Laboratory™

Multimedia over IP

IP phone, IP video, IP music, IP chat

Wireless & Multimedia Network Laboratory™

3GPP - Release 5 IMS & HSDPA

Wireless & Multimedia Network Laboratory™

IMS Service Scenario

1 John's call directed to PC, as Bob prefers

2 E-mail download slows down to allocate John's call

3 Trailer undergoes content adaptation

4 Higher priority incoming call (from boss) and John's call is put on hold

Sharing of web, streaming and voice call sessions

Wireless & Multimedia Network Laboratory™

Wireless sensor network: data gathering

Sensor node Sensing Base Sink

Communication link

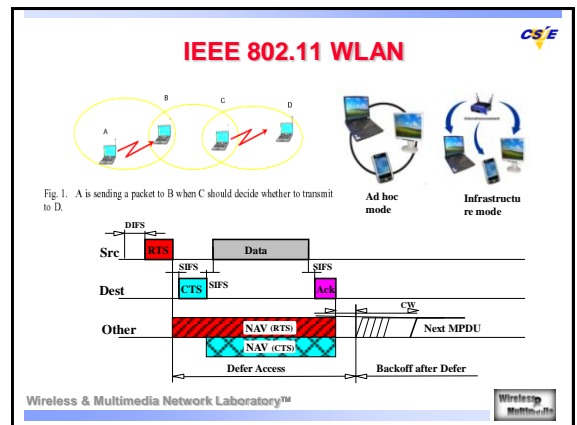

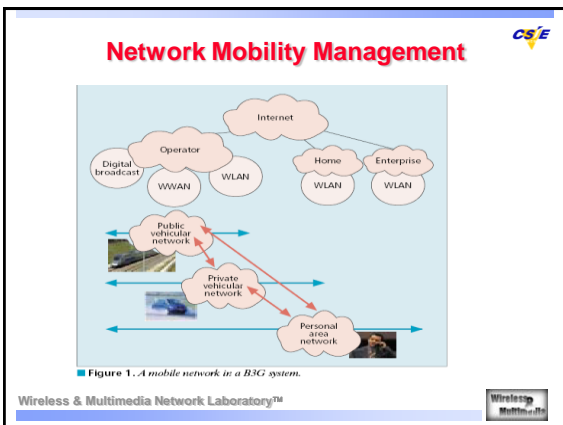

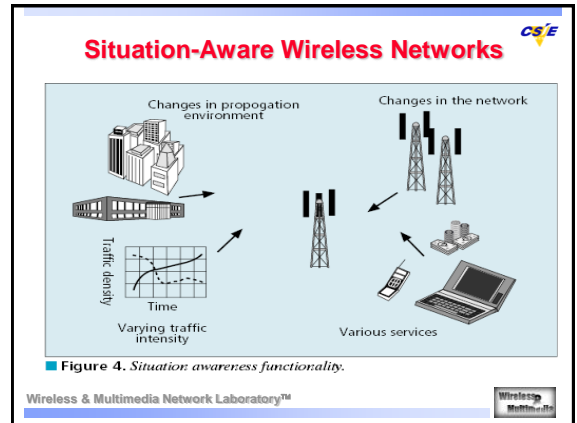

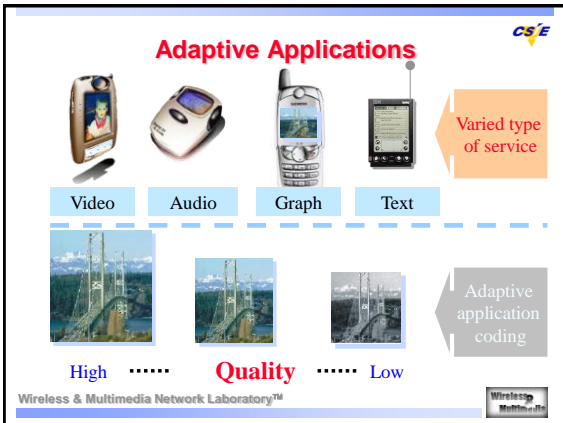

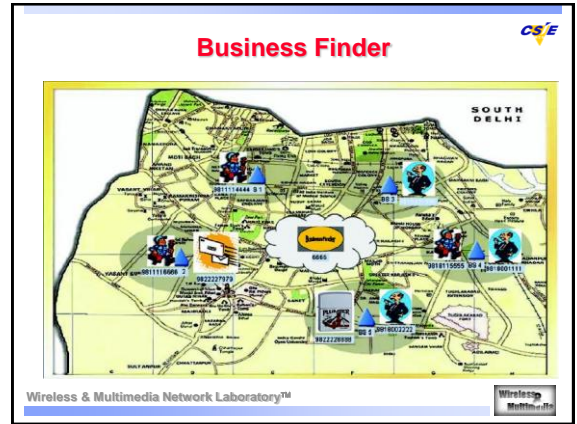

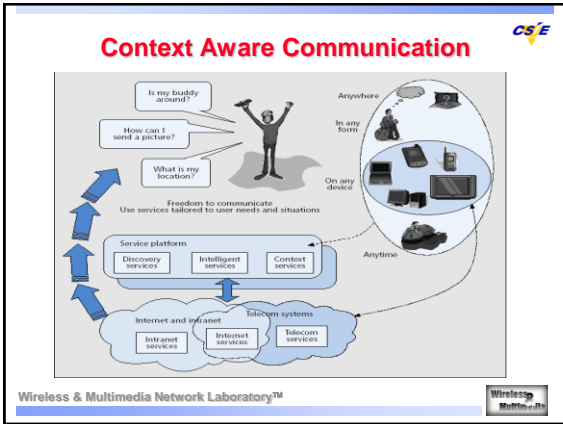

Wireless & Multimedia Network Laboratory™

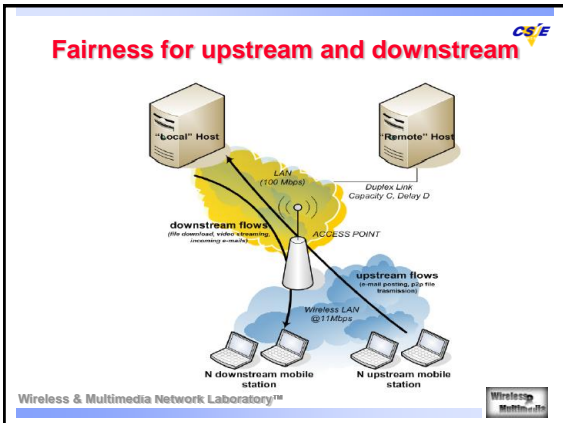

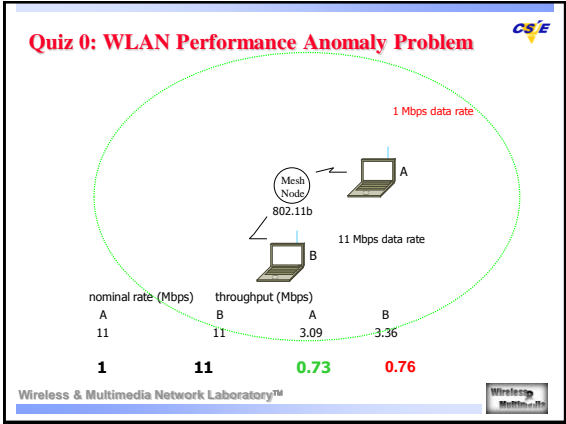

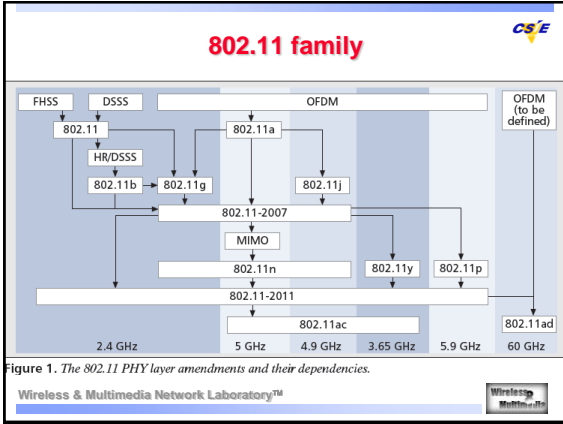

Video Transmission in VANET

GPS gets instant video streams from the surveillance cameras at an intersection.

The driver can get a better view of the traffic.

Wireless & Multimedia Network Laboratory™

Expectation of the Class

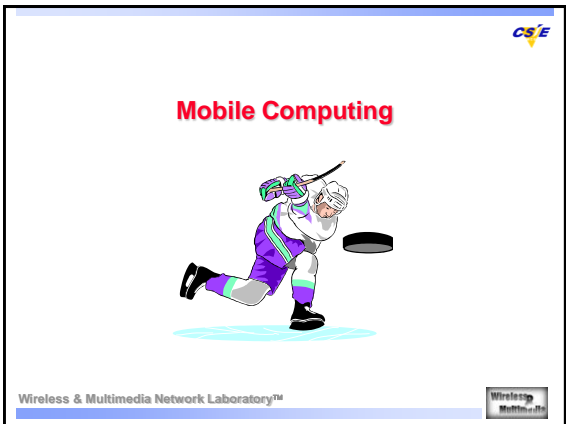

- ◆ Basic Understanding of PCS world
- ◆ Being able to do the wireless research
- ◆ Developing the capability to invent the key wireless applications

Wireless & Multimedia Network Laboratory™

Course Process

- ◆ Paper reading and your presentations
- ◆ Wireless Multimedia Applications Exercises

Wireless & Multimedia Network Laboratory™

CS/E

Mobile phone today = multipurpose terminal for ...

Internet Browser Information Client

E-mail Client E-purse

Authentication Device Share dealing, etc.

Wireless & Multimedia Network Laboratory™

CS/E

Reading list for This Lecture

- ◆ Required Reading:
 - (Cfox95) D. Cox, "Wireless Personal Communications: What is it?", IEEE Personal Communication Magazine, (April 1995) pp.20-35
 - (S.2001) M. Satyanarayanan, "Pervasive Computing: Vision and Challenges", IEEE Personal Communication Magazine, (August 2001), pp.10-17
 - (B12001) Qi Bi, George I. Zysman, and Hank Menkes, "Wireless Mobile Communications at the Start of the 21 Century", IEEE Communication Magazine (January 2001), pp. 110-116
- Further Reading
 - (Bolcskei2001) H. Bolcskei, A. J. Paulraj, K. V. S. Hari, and R. U. Nabar, "Fixed Broadband Wireless Access: State of the Art, Challenges, and Future Directions", IEEE Communication Magazine

Wireless & Multimedia Network Laboratory™

CS/E

Mobile Computing

Applications	Verticals	Horizontals	
Operating Systems	Mobile Operating Systems		
Devices	Notebooks	PDAs	Phones PIM
Wireless Networks	WANs		LANs

Wireless & Multimedia Network Laboratory™

CS/E

Mobile Computing

- ◆ information processing in general
 - not just communication or just computing, but both
- ◆ Any medium or combination of medium
 - process not just telephone voice or just data, but multimedia
- ◆ Mobility
 - components of the systems may be
 - moving, tether-less (wireless), portable
 - uses of the system may be moving

Wireless & Multimedia Network Laboratory™

CS/E

Why should we care ?

- ◆ Reason # 1 : \$\$\$ & jobs
- ◆ Explosive growth of wireless voice, paging, and data services
 - 35-60 percent annual growth in the past decade
 - mobile phones in US will be 42 % of fixed -line phones by 2000
 - 700 million mobile users at the end of 2000
 - One billion expected by 2003
- ◆ Big demand for portable communicators and computers
 - 2 M portable computer in 1988 to 74.1 M units in 1998

Wireless & Multimedia Network Laboratory™

CS/E

Is there a more "academic" reason ?

- ◆ Reason # 2: a next step in the evolution of information system
- ◆ Evolution from personal computing to networked computing to mobile computing
- ◆ Evolution from wired telephony to cordless telephony to mobile cellular telephony
- ◆ At the same time, unification of computing and communication

Wireless & Multimedia Network Laboratory™

Mobile Multimedia Systems

- Ubiquitous information access (everybody else)
 - e.g. wireless computing, mobile computing, nomadic computing
 - information distributed everywhere by "the net"
 - users carry (wireless) terminals to access the information services
 - terminal is the universal service access device
 - terminals adapt to location and services
 - Knowledge-based society
- Flexible Users Choices
 - In terms of access, service, content
 - Any where, anytime, any terminal equipments
- Wearable Computing terminal / Mobile Broadband services (MBS)

Wireless & Multimedia Network Laboratory™

Pervasive Computing

- Technology that disappears
 - The most profound technologies are those that disappear. They weave themselves into the fabric of everyday life until they are indistinguishable from it.
- Ubiquitous (Invisible) Computing (Xerox PARC)
 - Cheap computers of different scale and types embedded everywhere
 - Potentially 100s of computers per room that disappear into background (e.g. active badge, tabs, pads, live boards..)
 - User centric, not terminal centric
 - Computers swapped and shared among users
- Effective Use of Smart Spaces
- Invisibility
- Localized Scalability
- Masking Uneven Conditioning

Wireless & Multimedia Network Laboratory™

Support for Pervasive Computing

- User Intent
- Cyber Foraging
- Adaptation Strategy
- High-Level Energy Management
- Balancing Pro-activity and Transparency
- Privacy and Trust
- Impact on Layering

Wireless & Multimedia Network Laboratory™

Pervasive Computing

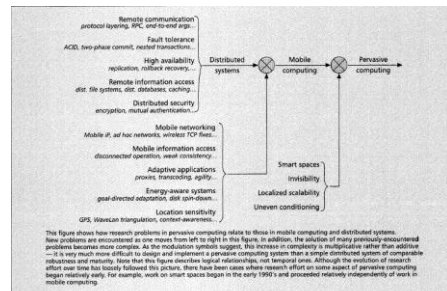

Figure 1. Taxonomy of computer systems research problems in pervasive computing.

Wireless & Multimedia Network Laboratory™

Aura Client

This figure shows the components of an Aura client and their logical relationships. The text in *italics* indicates the role played by each component. Code and Chrona were created prior to Aura, but are being modified substantially to meet the demands of pervasive computing. In the case of Odyssey, these changes are sufficiently extensive that they will result in Chrona, a replacement. Other components, such as Prism and Spectra, are being created specifically for use in Aura. Additional components are likely to be added over time since Aura is relatively early in its design at the time of this writing. Server and infrastructure support for Aura are not shown here.

Figure 2. The structure of an Aura client.

Wireless & Multimedia Network Laboratory™

Wireless Communications

Mobile Communications
Fixed Broadband Wireless Communications

Wireless & Multimedia Network Laboratory™

Evolution of Mobile Wireless Systems

- ◆ First Generation : Analog – Voice
 - Analog modulation
 - Cellular phone (AMPS) with manual roaming
 - Cordless phones
 - Packet radio networks
- ◆ Second Generation : Digital - Voice & Data
 - WAP (wireless application protocol)
 - 2.5 G GPRS
 - Wireless data LANs (802.11), MANs (Metricom), WANs (CDPD, ARDIS, RAM)
- ◆ Third Generation: Digital – Multimedia
 - Unified digital wireless access anytime, anywhere
 - Voice, data, images, video, music, sensor etc.
- ◆ 4G- Life after Third-Generation Mobile Communications

Wireless & Multimedia Network Laboratory™

Cellular Service Subscription

Wireless Personal Communications

- ◆ What is it?
 - Cellular telephone
 - Cordless telephone
 - Paging systems
 - Wide area data networks
 - Local area data networks
- ◆ Many ways to segment PCS
 - Applications
 - Extent of coverage
 - Degree of mobility (speed, area)
 - Circuit switched voice vs. packet-switched data
 - Mode of communication (messaging, two-way real time, paging, agents)
 - User location (indoor vs. outdoor, train, airplane)
- ◆ Common ingredients in all PCS activity
 - Desire for mobility in communications
 - Desire to be free from tethers

Wireless & Multimedia Network Laboratory™

2000 Market Share

Figure 5. Estimated market shares of 1G and 2G wireless mobile systems in 2000.

Wireless & Multimedia Network Laboratory™

Mobile Terminal Growth

Figure 1. Subscriber growth and IC reduction in mobile terminals.

Wireless & Multimedia Network Laboratory™

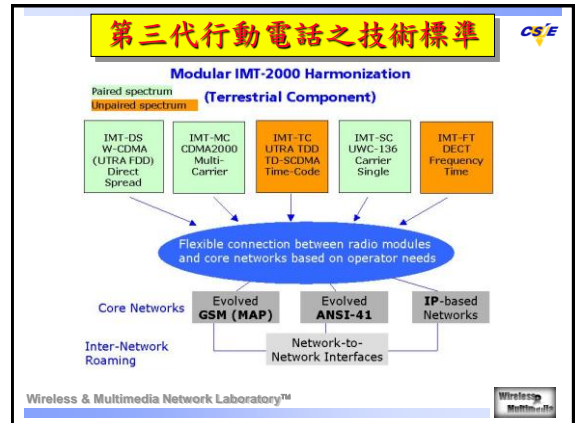

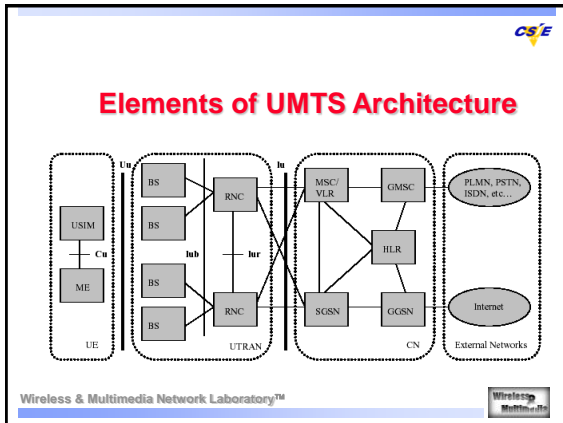

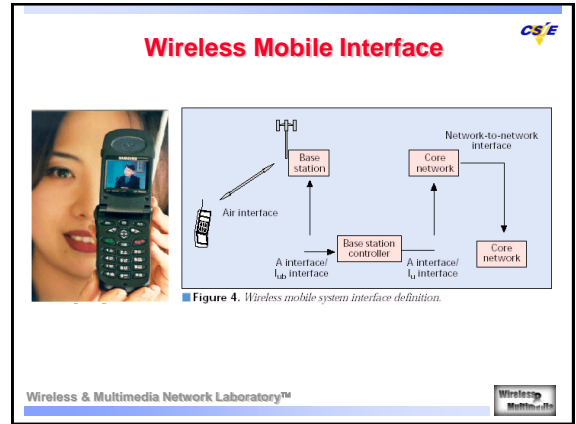

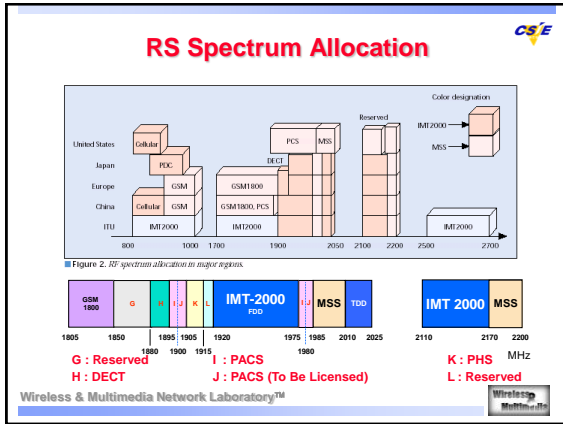

GPRS Architecture

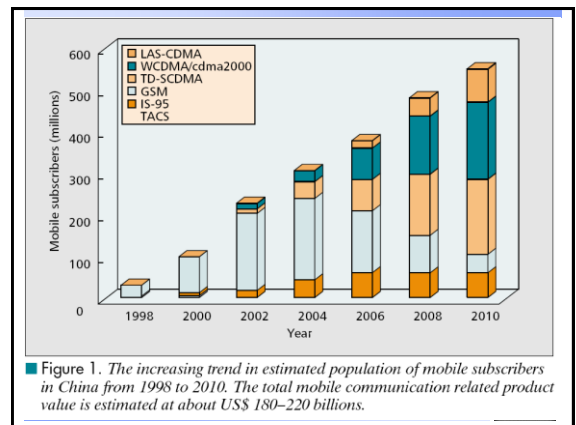

Wireless & Multimedia Network Laboratory™

	Cdma2000	WCDMA	TD-SCDMA
Multiple access	DS-SSMA/MC-CDMA	DS-SSMA	TDMA/DS-SSMA
CLPCF	800 Hz	1600 Hz	200 Hz
PCSS	1 dB (0.5, 0.25 optional)	0.25-1.5 dB	1, 2, 3 dB
Channel coding	Convolutional or turbo coding	Convolutional, RS, or turbo coding	Convolutional or turbo coding
Spreading code	DL:Walsh, UL:M-ary Walsh mapping	OVSF	OVSF
VSF	4...256	4...256	1...16
Carrier	2 GHz	2 GHz	2 GHz
Modulation	DL: QPSK, UL: BPSK	DL: QPSK, UL: BPSK	QPSK, 8-PSK (at 2 Mb/s)
Bandwidth	1.25*2/3.75*2 MHz	5*2 MHz	1.6 MHz
UL-DL spectrum	Paired	Paired	Unpaired
Chip rate	1.2288/3.6864 Mchips/s	3.84 Mchips/s	1.28 Mchips/s
Frame length	20 ms, 5 ms	10 ms	10 ms
Interleaving periods	5/20/40/80 ms	10/20/40/80 ms	10/20/40/80 ms
Maximum data rate	2.4 Mb/s	2 Mb/s	2 Mb/s
Pilot structure	DL: CCMP, UL: DTMP	DL: DTMP, UL: DTMP	CCMP
Detection	PSBC	PCBC	PSBC
Inter-BS timing	Synchronous	Asynchronous/synchronous	Synchronous

CCMP: common channel multiplexing pilot; DTMP: dedicated time multiplexing pilot; VSF: variable spreading factor; CLPCF: channel power control frequency; PCSS: power control step size; DL: downlink; UL: uplink; PSBC: pilot symbol based coherent; PCBC: pilot based coherent

Wireless & Multimedia Network Laboratory™

What problem does Multimedia Bring?

Emerging technologies:

1. "Datagrams" + "Flows" IPv6
2. "Virtual Circuits" (ATM)

5

Wireless & Multimedia Network Laboratory™

System Configurations

- ◆ Ad hoc ~ Multi-hop
 - Wireless LAN
 - Blue-tooth
 - Packet Radio
 - WAMIS
- ◆ Cellular ~ GSM, WAP, GPRS, 3G
- ◆ Satellite ~ LEO, GEO

Wireless & Multimedia Network Laboratory™

Ad Hoc Wireless Network

Wireless & Multimedia Network Laboratory™

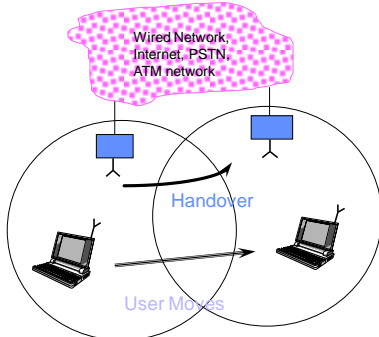

Access Point Gateway

Wireless & Multimedia Network Laboratory™

Wired Network, Internet, PSTN, ATM network

Wireless & Multimedia Network Laboratory™

Typical Cellular Call

- ◆ Initialization (find your base-station)
- ◆ Service Request
 - Location Level : Paging
 - Channel Assignments
- ◆ Handoff

Wireless & Multimedia Network Laboratory™

Wireless Comm: Heterogeneity & Security

CS/E

Wireless & Multimedia Network Laboratory™

Tight and Loose Internetworking

CS/E

Figure 1. a) Tight and b) loose interworking architecture of 3G WLAN networks.

Wireless & Multimedia Network Laboratory™

Limited & Variable Bandwidth

CS/E

- ◆ Low bandwidth compared to wired
- ◆ Highly variable bandwidth
- ◆ High latency

Wireless & Multimedia Network Laboratory™

Wireless Communication

CS/E

- ◆ More difficult than wired communication
- ◆ Dis-connections

Wireless & Multimedia Network Laboratory™

Mobility

CS/E

- ◆ Address migration
- ◆ Location-dependent information
- ◆ Migration locality

Wireless & Multimedia Network Laboratory™

Portability

CS/E

- ◆ Light weight power
- ◆ Risks to data
- ◆ Small user interface
- ◆ Small storage capacity

Wireless & Multimedia Network Laboratory™

Challenges in Mobile Multimedia Information System

- ◆ Portable end-points
- ◆ End-to-end Quality of Services
- ◆ Seamless operation under context (location) changes
- ◆ Context-aware operation
- ◆ Secure operation

Channel Propagation and Fading
