

無線網路多媒體系統 Wireless Multimedia System

Lecture 6: CDMA & 3G Trend 吳曉光博士

Wireless & Multimedia Network Laboratory™

Agenda

- ◆ Spread Spectrum (Multipath, interferences from other cells)
- ◆ W-CDMA
- ◆ Evolutions of PCS
- ◆ ALL IP Challenges
 - Mobile IP/Cellular IP
 - QoS Provisions: Integrated Service / DiffServ
- ◆ Next Week (Mobile IP)

Wireless & Multimedia Network Laboratory™

Reading

- ◆ [Kohn95]Ryuji Kohno, Reuven Meidan, and Laurence B. Milstein Spread Spectrum Access Methods for Wireless Communications, IEEE Communication Magazine, 1995
- ◆ [Dahlman98]Erick Dahlman, Bjorn Gudmundson, Mat Nilsson and Johan Skold, UMTS/IMT-2000 Based on Wideband CDMA, IEEE Communication Magazine 1998
- ◆ [Ojanpera98] T. Ojanpera, R. Prasad, "An Overview of Third-Generation Wireless Personal Communications: An European Perspective, IEEE Personal Communication Magazine 1998

Wireless & Multimedia Network Laboratory™

Code Division, Spread Spectrum

What is Going to Happen in CDMA?

Wireless & Multimedia Network Laboratory™

CDMA Era

| | |
|---------------------|---|
| Pioneer Era | |
| 1949 | John Pierce: time hopping spread spectrum |
| 1949 | Claude Shannon and Robert Pierce: basic ideas of CDMA |
| 1950 | De Rosa-Rogoff: direct sequence spread spectrum |
| 1956 | Price and Green: antinultipath "RAKE" patent |
| 1961 | Magnuski: near-far problem |
| 1970s | Several developments for military field and navigation systems |
| Narrowband CDMA Era | |
| 1978 | Cooper and Nettleton: cellular application of spread spectrum |
| 1980s | Investigation of narrowband CDMA techniques for cellular applications |
| 1986 | Formulation of optimum multiuser detection by Verdu |
| 1993 | IS-95 standard |
| Wideband CDMA Era | |
| 1995 | Europe :FRAMES FMA2 |
| | Japan :Core-A |
| | USA :cdma2000 |
| | Korea :TTA I TTA II |
| 2000s | Commercialization of wideband CDMA systems |

WCDMA

Wireless & Multimedia Network Laboratory™

Digital to Analog Modulation

Figure 6.2 Single-stage digital modulation (TDMA and FDMA).

Wireless & Multimedia Network Laboratory™

Digital-Digital-Analog Modulation

Figure 6.3 Two stages of modulation in a spread spectrum system.

Digital-Digital-Analog Modulation

Figure 6.3 Two stages of modulation in a spread spectrum system.

Digital Correlator

Figure 6.4 Two stages of demodulation in a spread spectrum receiver.

DS-CDMA

- Processing Gain:
- SF=2 cases:
 - $(1, 1) \otimes (1, 1) = 1+1=2$ (Processing Gain)
 - $(1, 1) \otimes (1, -1) = 1-1=0$ (orthogonal)
- SF=4 cases:
 - $(1, 1, 1, 1) \otimes (1, 1, 1, 1) = 1+1+1+1=4$ (Processing Gain)
 - $(1, 1, 1, 1) \otimes (1, 1, -1, -1) = 1+1-1-1=0$ (Orthogonal)
- $SIR = Pr * \text{Processing Gain} / \text{Interference}$
- $= Pr * (\text{Total_Radio_Frequencyband} / \text{Bitrate}) / \text{Interference}$

Multiple correlators

- Multiple correlators in each receiver
- At any instant of time, the signal carriers in the different correlators are synchronize to signal paths with different propagation times
- A search circuit examines the arriving signal in order to detect the appearance of a new path, then assign a correlator to synchronize the signal on the path

Multiple correlators

- Multiple correlators in each receiver

Spread Spectrum Multiple Access

Wireless & Multimedia Network Laboratory™

Interference Rejection

Wireless & Multimedia Network Laboratory™

Spread Spectrum Signal

Wireless & Multimedia Network Laboratory™

CDMA Concept

- ◆ Multiple Access Capability
- ◆ Protection Against Multipath Interference
- ◆ Interference Rejection
- ◆ Anti-Jamming Capability – Especially Narrow Band Jamming
- ◆ Low Probability Interception

Wireless & Multimedia Network Laboratory™

Direct Sequence Cellular

Idealized grid of Hexagonal cells

- ◆ DS spread spectrum signals are generated by linear modulation with wideband PN sequences which are assigned to individual users
- ◆ Universal Frequency Reuse: One-cell frequency reuse pattern
- ◆ Introduction of a new cell will be less restricted than in the case of either FDMA or TDMA
- ◆ (FDD) Frequency Division Duplex Operation: One frequency band is used for the base-to-mobile (forward or down link), one frequency band is used for the mobile-to-base link (the reverse link or uplink)

Wireless & Multimedia Network Laboratory™

Power Control (Reverse Link)

- ◆ Reverse Link: asynchronous, asynchronous CDMA system is vulnerable to the "near-far" problem
- ◆ Power Control: minimize consumption of the transmitted power, fast enough to compensate for Rayleigh fading
- ◆ Capacity is bounded by number of users (MAI Multiple Access Interferences)

Everybody has a Code (PN), asynchronous

Wireless & Multimedia Network Laboratory™

Power Control (Forward Link)

- Forward Link: the users can be orthogonalized, (however, the orthogonalization is not preserved between different paths of the multipath propagation, nor is it preserved between the forward links of different cells)
- Power Control: Since the cell's signals can be received at the mobile with equal power, the forward link does not suffer from near-far problem
- Cell boundary

Everybody has a Code (PN) synchronous

Wireless & Multimedia Network Laboratory™

Cellular Capacity

- Capacity of the reverse link (typically asynchronous link)

$$\left(\frac{E_b}{\eta_0}\right)_{\text{eff}} = \frac{1}{\frac{\eta_0}{E_b} + \frac{2}{3G}(M-1)(1+K)\alpha}$$

Wireless & Multimedia Network Laboratory™

Radio Resource Management

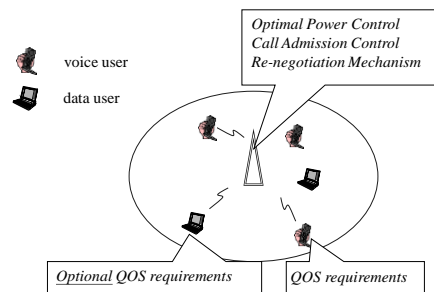

- Power as the common resource makes W-CDMA very flexible
 - Link improvement, less power, more capacity
- Orthogonal variable spreading factor (OVSF) for variable bit rate

Wireless & Multimedia Network Laboratory™

Call Admission Control

Wireless & Multimedia Network Laboratory™

Soft Handovers (Macro Diversity)

Wireless & Multimedia Network Laboratory™

Softer Handovers (Space Diversity)

Wireless & Multimedia Network Laboratory™

Power Control (Open & Close Loop)

Wireless & Multimedia Network Laboratory™

Close-Loop Power Control

- Compensates a fading channel (1500 times per second)

Wireless & Multimedia Network Laboratory™

UMTS/IMT-2000 Based on Wideband CDMA

What is going to happen for WCDMA

Wireless & Multimedia Network Laboratory™

Application Support in UMTS

- UMTS (Universal Mobile Telecommunication System)
- UTRA (UMTS Terrestrial Radio Access)
- Support:
 - 384 kb/s for wide-area coverage
 - 2 Mb/s for local coverage
- Multimedia Applications Requirements
 - Packet-oriented
 - Variable bit rate
 - Network resources can be available on a shared basis
 - E_b/N_0

Wireless & Multimedia Network Laboratory™

第三代行動電話之技術標準

Wireless & Multimedia Network Laboratory™

Key W-CDMA Features

- Performance Improvements
 - Capacity Improvements (3 dB, 384 kb/s, 1.9 Mb/s, 130 users)
 - Coverage and Link Budget Improvements (reuse GSM cell, 144 kb/s)
- Service Flexibility
 - Support of a wide range of services with maximum rate of 2 Mb/s, the possibility for multiple parallel services on one connection
 - A fast and efficient packet-access scheme
- Operator Flexibility
 - Support of asynchronous inter-base-station operation
 - Efficient support of different deployment scenarios, HCS, hot-spot
 - Support of evolutionary technologies such as adaptive antenna arrays and multi-user detection
 - A TDD mode designed for efficient operation in uncoordinated environment

Wireless & Multimedia Network Laboratory™

About 3G

- Organization :
 - 3GPP (3rd Generation Partnership Project)
 - 3GPP2 is the standardization group for IS-95 (CDMA)
- IMT-2000 (International Mobile Telephony 2000)
 - global standard proposed by the ITU
- IMT-2000 3G standards :
 - TD-SCDMA
 - CDMA2000
 - W-CDMA

Wireless & Multimedia Network Laboratory™

Development : 2G to 3G

Wireless & Multimedia Network Laboratory™

WCDMA

Wideband CDMA

- DS-SS (Direct-Sequence Spread Spectrum)
- Use spreading factors 4 - 512 to spread the base band data over ~5MHz band.

| Multiple access method | DS-SS (Direct-Sequence - CDMA) |
|------------------------|--|
| Duplex method | FDD / TDD |
| Chip rate | 3.84 Mcps |
| Frame length | 10 msec |
| Base station frequency | Asynchronous operation |
| Service multiplexing | Multiple services with different quality of service requirements multiplexed on one connection |
| Multi-rate concept | Variable spreading factor and multi-code |

Wireless & Multimedia Network Laboratory™

UMTS/WCDMA Features

- Speed :
 - UMTS 384Kbps up to 2Mbps
- Bands :
 - Asia & Europe 2100MHz North America 800 & 1900MHz
- Applications :
 - Email, internet, fax, music, image, video...etc
- Global Access :
 - Users can move between GSM, GPRS and UMTS coverage areas without dropping connections or losing access to their network.

Wireless & Multimedia Network Laboratory™

UMTS Architecture

- Core Network : Connection with External Networks
- UTRAN : Functions about Radio
- UE : communication between air interface and users.

Wireless & Multimedia Network Laboratory™

First Step of HSPA - HSDPA

- WCDMA R5
 - Proposed by 3GPP on 2001
 - HSDPA Technique

- HSDPA (High Speed Downlink Packet Access)
 - Data rate 3Mbps up to 14Mbps
 - 3 times Capacity
 - Backward compatible with WCDMA

Wireless & Multimedia Network Laboratory™

Enhanced WCDMA - 3.5G HSDPA

- Defined in 3GPP Release 5.
- Higher data rate : 2Mbps~14Mbps

Wireless & Multimedia Network Laboratory™

HSDPA Characteristic

- New Transport Channel
 - HS-DSCH
- Short TTI
 - 2ms
- AMC
 - Modulation :
 - QPSK(2bits/symbol)
 - 16QAM(4bits/symbol)
 - Channelized code 1~15
- HARQ
 - SAW HARQ (simplest and little overhead)
- Fast Scheduling
 - Do packet Scheduling and retransmission in Node B

Wireless & Multimedia Network Laboratory™

MAC Architecture

- UTRAN Side MAC entity is similar to the UE side except that there will be one MAC-d for each UE.

Wireless & Multimedia Network Laboratory™

SF and Modulation

- QPSK can show 2 bits per symbol, and 16QAM can show 4 bits per symbol.

- Channelization code at a fixed SF = 16.

Wireless & Multimedia Network Laboratory™

HS-PDSCH

- HS-PDSCH carries the data traffic in terms of MAC-hs PDU.
- Fixed $SF=16$; up to 15 parallel channels
- 14Mbps = 960 x 15 ~ 14400 kbps

Wireless & Multimedia Network Laboratory™

HS-DPCCH

- HS-DPCCH feedbacks **ACK/NACK** and channel quality information (CQI).
- Fixed $SF=256$.

Wireless & Multimedia Network Laboratory™

HS-SCCH

- Fixed $SF=128$: UE can monitor up to 4 HS-SCCH simultaneously.
- HS-SCCH signals the configuration to be used next.

Wireless & Multimedia Network Laboratory™

DCH, DSCH and HS-DSCH

| Feature | DCH | DSCH | HS-DSCH |
|----------------------|---------------|---------------|---------------------------|
| Variable SF | Yes (4 ~ 512) | Yes (4 ~ 256) | No (16) |
| Fast power control | Yes | Yes | No |
| Modulation | QPSK | QPSK | Adaptive using QPSK/16QAM |
| HARQ | No | No | Yes |
| TTI | 10 to 80 ms | 10 or 20 ms | 2 ms |
| Multi-Code operation | Yes (up to 8) | Yes (up to 6) | Yes (extended to 15) |
| Mac Processing | RNC | RNC | Node B |

Wireless & Multimedia Network Laboratory™

CQI (Channel Quality Indicator)

- Estimate the channel quality from CPICH and feedback CQI via HS-DPCCH cyclically. (In Spec25.331 $k = 0, 2, 4, 8, 10, 20, 40, 80, 160$)
- Delay and error of bits affect the accuracy of estimation.

$$CQI = \begin{cases} 0 & SNR \leq -16 \\ \left\lfloor \frac{SNR + 16.62}{1.02} \right\rfloor & -16 < SNR < 14 \\ 30 & 14 \leq SNR \end{cases}$$

Wireless & Multimedia Network Laboratory™

UE Category

- Classify the UE category base on the capability of UE.

| Category | Codes | Inter-TTI | TB Size | Total # of Soft Bits | Modulation | Data Rate |
|----------|-------|-----------|---------|----------------------|------------|-----------|
| 1 | 5 | 3 | 7300 | 19200 | QPSK/16QAM | 1.2 Mbps |
| 2 | 5 | 3 | 7300 | 28800 | QPSK/16QAM | 1.2 Mbps |
| 3 | 5 | 2 | 7300 | 28800 | QPSK/16QAM | 1.8 Mbps |
| 4 | 5 | 2 | 7300 | 38400 | QPSK/16QAM | 1.8 Mbps |
| 5 | 5 | 1 | 7300 | 57600 | QPSK/16QAM | 3.6 Mbps |
| 6 | 5 | 1 | 7300 | 67200 | QPSK/16QAM | 3.6 Mbps |
| 7 | 10 | 1 | 14600 | 115200 | QPSK/16QAM | 7.2 Mbps |
| 8 | 10 | 1 | 14600 | 134400 | QPSK/16QAM | 7.2 Mbps |
| 9 | 15 | 1 | 21900 | 172800 | QPSK/16QAM | 10.2 Mbps |
| 10 | 15 | 1 | 28776 | 172800 | QPSK/16QAM | 14.4 Mbps |
| 11 | 5 | 2 | 3650 | 14400 | QPSK only | 0.9 Mbps |
| 12 | 5 | 1 | 3650 | 14400 | QPSK only | 1.8 Mbps |

Wireless & Multimedia Network Laboratory™

UE Category 1-6 CQI table

| Cell value | Transport Block Size | Number of HS-DSCH | Modulation | Reference power adjustment A | M _{CS} | K _{CS} |
|------------|----------------------|-------------------|------------|------------------------------|-----------------|-----------------|
| 0 | N/A | 1 | QPSK | 0 | 9600 | 0 |
| 1 | 137 | 1 | QPSK | 0 | | |
| 2 | 173 | 1 | QPSK | 0 | | |
| 3 | 233 | 1 | QPSK | 0 | | |
| 4 | 317 | 1 | QPSK | 0 | | |
| 5 | 377 | 1 | QPSK | 0 | | |
| 6 | 461 | 1 | QPSK | 0 | | |
| 7 | 600 | 2 | QPSK | 0 | | |
| 8 | 792 | 2 | QPSK | 0 | | |
| 9 | 931 | 2 | QPSK | 0 | | |
| 10 | 1262 | 3 | QPSK | 0 | | |
| 11 | 1463 | 3 | QPSK | 0 | | |
| 12 | 1742 | 3 | QPSK | 0 | | |

| | | | | | | |
|----|------|---|--------|----|--|--|
| 20 | 5887 | 5 | 16-QAM | 0 | | |
| 21 | 6554 | 5 | 16-QAM | 0 | | |
| 22 | 7168 | 5 | 16-QAM | 0 | | |
| 23 | 7168 | 5 | 16-QAM | -1 | | |
| 24 | 7168 | 5 | 16-QAM | -2 | | |
| 25 | 7168 | 5 | 16-QAM | -3 | | |
| 26 | 7168 | 5 | 16-QAM | -4 | | |
| 27 | 7168 | 5 | 16-QAM | -5 | | |
| 28 | 7168 | 5 | 16-QAM | -6 | | |
| 29 | 7168 | 5 | 16-QAM | -7 | | |
| 30 | 7168 | 5 | 16-QAM | -8 | | |
